Department of Aerospace Engineering

Aerospace engineers are concerned with the application of scientific principles and engineering concepts and practices to design, build, test and operate aerospace systems. The curriculum is intended to provide students with a broad understanding of fundamental scientific and technological principles, and to develop the ability to use these principles in developing solutions to engineering problems.

The objectives of the aerospace engineering program are: (1) to help students develop written and oral communication skills and to acquire a knowledge of history, literature and society; (2) to provide students a solid foundation in and a sound working knowledge of basic engineering principles; (3) to help students obtain an understanding of the engineering principles and skills specifically needed in the aeronautical and astronautical disciplines; and (4) to assist and encourage each student to develop an enhanced ability to learn and think creatively.

Required courses cover aeronautical and astronautical subjects. Students may also choose to emphasize either aeronautical or astronautical systems. Technical electives allow concentration in such areas as aerodynamics, astronautics, flight dynamics and control, propulsion, structures, and structural dynamics. The design of aerospace components and systems is considered to be an integral part of the education of aerospace engineers. Hence, design is included throughout the curriculum, beginning with a sophomore course in aerospace fundamentals and culminating in the senior design course sequence. Students are required to apply their theoretical knowledge of aerodynamics, dynamics, structures and propulsion to solve open-ended problems and to produce portions of preliminary designs.

### Department of Biosystems Engineering

Biosystems Engineers ensure that we have the necessities of life: healthy food to eat, clean water to drink, renewable fuel and energy sources, and a healthy environment in which to live. Therefore, the mission of the Department of Biosystems Engineering at Auburn University is to develop and disseminate engineering knowledge to solve problems in biological systems, natural resources and the environment. It meets the resident instruction portion of that mission through the offering of a degree program which leads to a Bachelor of Biosystems Engineering. Options in Ecological Engineering and Forest Engineering are also available under the Biosystems Engineering degree program.

### Biosystems Engineering

The Department of Biosystems Engineering offers the only accredited degree in Biosystems Engineering in Alabama. It is committed to preparing students for productive professional careers in the biosystems industries and related natural resource and environmental systems sectors. Specific program educational objectives of the Biosystems Engineering degree program can be found at:

http://www.eng.auburn.edu/programs/bsen/programs/undergraduate/educational-objectives.html
The Biosystems Engineering program curriculum is coordinated by the Samuel Ginn College of Engineering. Students should apply for admission to the Samuel Ginn College of Engineering and complete the Pre-Biosystems Engineering program.

Ecological Engineering Option

The Department of Biosystems Engineering offers an option in Ecological Engineering as part of the Bachelor of Biosystems Engineering degree. This option prepares students to solve environmental problems by applying engineering knowledge to natural ecological and biological systems. Ecological engineering combines basic and applied science from engineering, ecology, economics, and natural sciences to design, construct, and manage sustainable ecosystems that have value to both humans and the natural environment. The ecological engineering option is coordinated by the Samuel Ginn College of Engineering. Students should apply for admission to the Samuel Ginn College of Engineering and complete the Ecological Engineering option portion of the Pre-Biosystems Engineering program.

Forest Engineering Option

The Department of Biosystems Engineering in conjunction with the Samuel Ginn College of Engineering and School of Forestry and Wildlife Sciences offers an option in Forest Engineering as part of the Bachelor of Biosystems Engineering degree. This option prepares students for productive professional careers in the forest products industry and related natural resource and environmental systems sector.

The Forest Engineering option is coordinated by the Samuel Ginn College of Engineering and the School of Forestry and Wildlife Sciences, and is administered by the Department of Biosystems Engineering. Students can become registered foresters upon completion of a minor in forest resources. Beginning students should apply to the Samuel Ginn College of Engineering and complete the Forest Engineering option portion of the Pre-Biosystems Engineering program. Students pursuing the Forest Engineering option must meet School of Forestry and Wildlife Sciences requirements for admission to the Forestry Summer Field Practicum.

Chemical Engineering

Chemical engineers contribute to society through the useful application of knowledge and understanding of chemistry, physics, biology, and mathematics. Chemical engineers traditionally have participated in many decisions crucial to the preservation and improvement of society, including energy, fuel, commodity chemical and food production, resource management, and the design of necessary pollution control measures. Emerging new areas such as biotechnology, space technology, nanofabrication technology, semiconductor devices and modern construction materials also utilize the unique capabilities of the chemical engineer. Many technologies to improve public health depend significantly on chemical engineering such as biomaterials, biomedical devices, medical diagnostcs, the chemical design and synthesis of drugs, the genetic engineering of therapeutic materials, drug delivery systems and medical imaging technology. Finally, chemical engineering plays an essential role in important environmental technologies such as atmospheric chemistry, product life cycle analysis, bioremediation, environmental risk and impact analysis, environmental friendly manufacturing technology and products, separation and conversion technologies for waste reduction and the cleanup of contaminated sites.

The instructional mission of the department is to provide its chemical engineering graduates with the tools, skills and competencies necessary to understand and apply today's technologies and, through life-long learning, successfully develop and employ tomorrow's technologies.

The Program Educational Objectives and Student Outcomes can be found at the following URL:

Because of their broad training and education, chemical engineers contribute to society in many functions, such as pure research, development, environmental protection, process design, plant operation and manufacturing, marketing, sales, and corporate or government administration.

The program is specially designed to assure all students have demonstrated capabilities in the core chemical engineering topics including material and energy balances, thermodynamics, chemical equilibria, heat, mass and momentum transfer, chemical reaction engineering, continuous and stagewise separation operations, process dynamics, statistics and control. The design experience is interwoven throughout the curriculum from elementary design principles in material and energy balances to the capstone senior process design and process control sequence employing advanced computer process and control simulators and experimental control systems.

The curriculum is specifically designed to enable graduates to model and design chemical and physical processes, design and conduct experiments, analyze and interpret chemical engineering data, and to determine capital and operating costs for chemical and physical processes. The curriculum prepares graduates to understand the need for professional integrity and ethical decision making in the practice of chemical engineering as well as providing an understanding of contemporary issues including business practices, environmental, health, and safety and other public interests. Students are also prepared for graduate study in chemical engineering, medicine, business and law.

Because of the breadth of chemical engineering opportunities, the department offers a number of specially designed program specializations that provide unique training and course selection to those students who wish to concentrate in a particular area or technology. The current program specializations are biochemical engineering, biomedical engineering, computer-aided chemical engineering, environmental chemical engineering, pre-medicine specialization and pulp, paper and bio-resource engineering.

The AU Bulletin lists the University Core Curriculum requirements for students in the College of Engineering. Students must complete a sequence in either Literature or History. Because of the discipline specific requirements for the Humanities courses, it is recommended that a History sequence be completed in the Social Sciences courses.

Electives, Technical Electives, Advanced Chemistry Elective: See adviser for approved course listing. At least three (3) hours of Technical Electives must be coursework offered by an engineering department.

CHEM 1110, 1111, 1120 and 1121 are preferred, but CHEM 1030, 1031, 1040 and 1041 are acceptable substitutes. Honors sections of all courses will be accepted for this curriculum.

Civil Engineering

Civil engineers conceive, plan, design, construct, operate, and maintain the civil infrastructure systems that meet societal needs in our practical world. The Auburn University Department of Civil Engineering seeks to prepare graduates who value honesty, hard work, and sustainability, and—after the first few years of their professional career—have

- Functioned as efficient, reliable team members in the evaluation, planning and design, construction, or operation and maintenance of civil infrastructure systems,
- Demonstrated their belief in lifelong education by expanding their body of knowledge, maturing professionally, and progressing toward licensure as professional engineers,
- Assumed leadership roles in their workplace by exercising initiative and responsible stewardship, and
- Employed the human touch in engaged involvement in their professions and communities.

The first two years of the undergraduate program focus on basic principles, which are then applied in the last two years in required and elective courses in these civil engineering specialty areas:

- Construction Engineering and Management
- Environmental Engineering
- Geotechnical Engineering
- Hydraulic and Hydrological Engineering
- Pavements and Materials Engineering
- Structural Engineering
- Transportation Engineering

Engineering science and design are integrated throughout, with a gradual shift in emphasis from introduction of fundamental concepts, principles, and tools to analysis and design in increasingly realistic situations. The curriculum culminates in the capstone senior design experience. Bachelor of Civil Engineering graduates are prepared for a variety of entry-level civil engineering positions or graduate/professional schools.

¹ The AU Bulletin lists the University Core Curriculum requirements for students in the College of Engineering. Students must complete a sequence in either Literature or History. Because of the discipline-specific requirements for the Humanities courses, it is recommended that a History sequence be completed in the Social Sciences courses.

² Science electives, technical electives, the science elective, and the senior design project must be selected from lists of approved courses available from the Department of Civil Engineering. Each student must take a specialty elective in at least three of the seven specialty areas: construction, environmental, geotechnical, hydraulic, pavements and materials, structural, and transportation.

## Computer Science and Software Engineering

### Computer Science

The computer science curriculum, which leads to the bachelor of science in computer science degree, provides an excellent preparation for students seeking careers as software professionals and in computing-related fields, as well for those planning to pursue graduate study. The curriculum builds on a strong foundation in science, mathematics, social sciences, humanities and computer science with advanced course work in theoretical computer science, human-computer interaction, and net-centric computing. Course work ensures that students receive hands-on exposure to a variety of computer systems, tools and techniques. Elective courses allow
students to specialize in core areas of computer science such as networking, database systems, and artificial intelligence. In addition, students select a concentration of 9 semester credit hours outside computer science (e.g., business, mathematics, physics, etc.). This concentration enriches students’ educational experience and adds breadth of knowledge by providing an opportunity to explore a second field of study to which computer science can be applied. The curriculum also emphasizes oral and written communication skills, the importance of ethical behavior, and the need for continual, lifelong learning. The overall educational objectives of the Computer Science program are for graduates of the program to attain success in their chosen profession and/or post-undergraduate studies.

The undergraduate Computer Science program is accredited by the Computing Accreditation Commission of ABET, http://www.abet.org.

Software Engineering

The focus of the software engineering curriculum, which leads to the bachelor of software engineering, is on the analysis, design, verification, validation, construction, application, and maintenance of software systems. The degree program prepares students for professional careers and graduate study with a balance of computer science theory and practical application of software engineering methodology using modern software engineering environments and tools. The curriculum is based on a strong core of topics including software modeling and design, construction, process and quality assurance, intelligent and interactive systems, networks, operating systems, and computer architecture. The curriculum also enriches each student’s general education with a range of courses from science, mathematics, the humanities and the social sciences. Through advanced elective courses, the curriculum allows students to specialize in core areas of computer science and software engineering. Engineering design theory and methodology, as they apply to software systems, form an integral part of the curriculum, beginning with the first course in computing and culminating with a comprehensive senior design project, which gives students the opportunity to work in one or more significant application domains. The curriculum also emphasizes oral and written communication skills, the importance of ethical behavior, and the need for continual, life-long learning. The overall educational objectives of the Software Engineering program are for graduates of the program to attain success in their chosen profession and/or post-undergraduate studies.

1. This is a completer (a first bachelor’s degree in which non-major coursework is completed at another institution) or second bachelor’s degree program.

2. The CPSC courses are offered completely on-line in 7.5 week terms (5 terms/year).

3. The credit hours for each course are indicated name to the right of the course name in the table above (In-Major Courses). All courses are three credit hour courses.

4. If taken as a first bachelor’s degree, the total number of credit hours required is 120. The core and general studies requirements (see Non-Major Course table below) can be satisfied by acceptable transfer credit, using standard university policies for accepting transfer credit as is used for the on-campus CSCI program, or by taking the Auburn University courses, either on campus or online, if online versions are available. If taken as a second bachelor’s degree, only the CPSC courses indicated in the table above are required.

5. For first bachelor’s degree students, courses for CPSC Elective and Core Science Sequence must meet CPSC degree policies. Students must consult with the CPSC Academic Advisor when selecting these courses. For first bachelor’s students, the Humanities and Social Science courses, if taken at Auburn, must be chosen from the set of courses designated as Humanities or Social Sciences in the Auburn University Core Curriculum.

Electrical and Computer Engineering

The Electrical and Computer Engineering curricula produce well-educated graduates prepared to practice engineering at a professional level in an era of rapid and challenging technological development. The educational objectives of the Electrical Engineering curriculum include developing within our graduates a basic foundation in seven fundamental areas of electrical engineering (circuits and systems, electromagnetics, electronics, digital systems, communications and signal processing, control systems, and power engineering) to provide the technical proficiency needed for the professional practice of electrical engineering. The educational objectives of the Computer Engineering Option include developing within our graduates a basic foundation in both electrical engineering (circuits and systems, electronics, and digital systems) and computer science to provide the technical proficiency needed for the professional practice of computer engineering, including the design and application of computer components and systems. In addition, both curricula have as educational objectives to develop within our graduates the ability to communicate their ideas effectively to technical and non-technical audiences and work effectively in multidisciplinary teams, to prepare them to take their places in society as responsible citizens, and to provide them with the basis for, and instill within them an appreciation of and enthusiasm for, lifelong scientific inquiry, learning and creativity.

The goal of the professional portion of each curriculum is to emphasize basic areas of study while providing the flexibility to accommodate a diversity of interests and talents. To this end, each curriculum emphasizes engineering design, hands-on laboratory experience, knowledgeable use of digital computer systems, oral and written communication skills, the importance of business, economic, social and global forces on engineering, appreciation of the need to maintain the highest ethical standards, and the maintenance of professional competence through continued self-improvement after graduation.

Each curriculum builds upon a solid foundation in mathematics and science. In the Electrical Engineering curriculum, topics in the seven fundamental areas of electrical engineering are introduced early and are carefully coordinated to provide the principles necessary for the practice of electrical engineering. In the Computer Engineering Option, fundamental topics in both electrical engineering and computer science are introduced early and are carefully coordinated to provide the principles necessary for the design and application of computer components and systems. In each case, design experience is interwoven throughout the curriculum by introducing basic design concepts early, emphasizing design experiences in the laboratories, and culminating with a capstone design project in the senior year. The senior year elective structure provides students with the flexibility to pursue a range of career options.

Industrial and Systems Engineering

Industrial and Systems Engineers plan, design, implement, and analyze systems. This engineering discipline is where technology, people, business and information intersect. The degree provides graduates with broad, flexible career opportunities with manufacturing, consulting, service or governmental organizations. The degree can also provide the foundation and background for further studies in engineering and business as well as professions such as law or medicine. The curriculum builds on a solid engineering mathematics and science core and adds courses in production and manufacturing, ergonomics and safety, engineering management, operations research, statistics, quality control, and information technologies. The curriculum graduates students who have:

• An ability to apply knowledge of mathematics, science, and engineering.
• An ability to design and conduct experiments, as well as to analyze and interpret data.
• An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
• An ability to function on multidisciplinary teams.
• An ability to identify, formulate, and solve engineering problems.
• An understanding of professional and ethical responsibility.
• An ability to communicate effectively.
• The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context.
• A recognition of the need for, and an ability to engage in, life-long learning.
• A knowledge of contemporary issues.
• An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

**Mechanical Engineering**

The curriculum in Mechanical Engineering focuses on the analysis, design, manufacturing, and maintenance of mechanical components and systems. Emphasis is placed on the fundamental concepts of engineering science and design needed in a variety of industries, including automotive, aerospace, biotechnology, material and chemical processing, microsystems and sensors, nanotechnology, machinery and robotics, pharmaceutical, energy production and distribution, heating and refrigeration, food production and processing, entertainment, pulp and paper, weapons systems, and many others. Mechanical engineering students take courses in several areas of engineering including: mechanics of rigid and deformable solids, thermo-fluid sciences, energy systems, dynamic systems and controls, design and manufacturing, materials, and electronics.

In compliance with the Engineering Accreditation Commission (EAC) of ABET, the Department of Mechanical Engineering at Auburn University has developed and maintained a well-defined set of Program Educational Objectives to assure the quality of our program and graduates. These objectives are broad statements that describe the career and professional accomplishments that the mechanical engineering degree program is preparing the graduates to achieve a few years after graduation. The objectives are consistent with the needs and expectations of the program constituencies, and are reviewed and updated regularly using an annual assessment process. The current program educational objectives are:
• Our graduates have rewarding careers where they use their technical proficiency and mechanical engineering education for the professional practice of mechanical engineering or any other career path they choose.
• Our graduates contribute to their chosen field by effectively leveraging a broad array of professional skills such as oral and written communication, leadership, and teamwork.
• Our graduates are life-long learners through a variety of means including self study, continuing education courses, and graduate level education.
• Our graduates maintain awareness of a broad range of contemporary issues and global concerns especially as they relate to the field of mechanical engineering.

Students are able to concentrate on areas of special interest through technical elective courses taken in the senior year. In addition, specialized concentrations are offered in Automotive Engineering and in Pulp and Paper Engineering. Minors are offered in Tribology, Business Engineering and Technology, and in Automotive Engineering and Manufacturing.

Materials Engineering

The curriculum in Materials Engineering (MATL) is structured to address problems associated with the design of materials and materials processes to meet specific needs for a variety of industries. Emphasis is on the basic sciences and principles of engineering with applications of these principles to materials behavior. The student must obtain a broad foundation in chemistry, physics and mathematics, which is applied in engineering courses. Within materials engineering courses, students obtain a foundation in the major areas of materials science and to the major classes of engineering materials, which is applied in courses in materials properties and selection, computational methods and in a capstone design course. Students gain in-depth experience in another engineering discipline through coordinated technical elective sequences. Students may design alternative cross-disciplinary sequences, but they must be coordinated and approved by the Materials Engineering Curriculum Committee. The objective of the MATL program is to produce graduates who are engaged in careers through which they apply materials engineering proficiency, effective communication and lifelong learning to provide technical, economic, or other benefits to society.

Material Engineering Minor

Students completing this 15-hour minor will have an understanding structure-property relationships of different types of materials and be able to apply this understanding to the processing and selection of materials for engineering applications. The minor includes courses that focus on each of the major classes of materials (metals, polymer and ceramics) and includes an elective to allow students to pursue their particular areas of interest. The minor will provide students in other disciplines with a better understanding of materials related to their particular interests.

Required Courses

1 The AU Bulletin lists the University Core Curriculum requirements for students in the College of Engineering. Students must complete a sequence in either Literature or History. In order to complete the degree in 122 credits, because of the Mechanical Engineering specific requirements for the Humanities and Fine Arts courses, it is recommended that a two course History sequence (HIST 1010, HIST 1020, HIST 1017, HIST 1027, HIST 1210, HIST 1220 or HIST 1217-1227) be completed in the Social Sciences.

2 Core Literature: ENGL 2200, ENGL 2207, ENGL 2210, ENGL 2217, ENGL 2230, ENGL 2240, ENGL 2250 or ENGL 2260.

Technical Elective - see adviser for approved course listing.

**Tribology Minor**

This 15-hour multidisciplinary minor prepares students from various science and engineering majors for careers that require a background in friction, wear and lubrication (tribology). Students will be prepared for not only the lubricant and bearing manufacturing industry, but for design and maintenance in the power generation, vehicle, and manufacturing industries. Students who complete this minor will acquire the skills necessary to identify critical parameters in a tribological system, design a tribological system for the needs of a specific application, including geometry, lubricant, and surface properties. Students will also understand the chemical formulation and operating mechanisms of lubricants and additives.

Polymer and Fiber Engineering

Bachelor of Polymer and Fiber Engineering

Polymers and fibers are high performance materials utilized in such diverse fields as plastics, elastomers (rubber), adhesives, surface coatings (paints), films, paper, packaging, insulation, filtration, aerospace, automotive, biomedical, composite, construction, environmental, industrial, marine, nonwoven, recreational, and safety materials.

Polymer and fiber engineering prepares graduates to work in research and development, product development, process engineering, composite engineering, quality engineering, industrial engineering, or technical sales; or to proceed to advanced studies in engineering, science, medicine, law, computer, business, or related fields.

Research and instruction in polymer and fiber engineering includes:

- Polymer synthesis and processing.
- Characterization and evaluation of structure and properties of polymeric materials using advanced techniques and state-of-the-art instrumentation.
- Modeling of structure-property-performance relationships emphasizing correlation of properties with the structure across nano-, micro-, and macro-length scales.
- Design, analysis, engineering, and assembly of polymeric fibrous materials into advanced engineered materials with novel compositions and tailored microstructures.
- Product, mold, and die design.

A solid foundation in mathematics, chemistry, and physics is applied in engineering and major courses during junior and senior years. Engineering design is integrated throughout the curriculum in major courses, laboratories, and a capstone design project which is completed during the senior year.

To accommodate the broad range of polymer and fiber opportunities, the undergraduate program offers two options leading to the bachelor of polymer and fiber engineering. The polymer option emphasizes polymer characterization, processing, and chemistry. The fiber option emphasizes the mechanics of composite materials and other fibrous structures.

Graduates will be actively engaged in one or more of the following:

The practice of engineering:

- Evidence of increasing responsibilities in the form of promotions, management or leadership duties, or other professional activities while employed in industrial, governmental, educational or consulting positions
- Evidence of recognitions and awards.
- Evidence of contributing to their chosen field of practice through the development and dissemination of technical knowledge, presentations, publications, patents, or other means.
- Evidence of meeting professional responsibilities in the form of mentoring, professional society activities, peer review, editorial work, or similar activities.
- The acquisition of new knowledge and skills.
- Evidence of pursuit of an advanced degree.
- Evidence of participation in ongoing professional development activities.
- Activities which meet their ethical responsibilities for public service:
  - Evidence of involvement in community service.
  - Evidence of involvement in K-12 education.
  - Evidence of providing input to policy makers.

Wireless Engineering

The wireless engineering curriculum is a joint offering of the Department of Electrical and Computer Engineering and the Department of Computer Science and Software Engineering, leading to the bachelor of wireless engineering (BWE). To meet the need for engineers that can improve life and business in these times of a mobile society, the program has the following educational objectives. Within a few years of graduation, alumni of the wireless engineering program are expected to have (1) contributed positively to the development and application of new wireless technologies and systems as an individual contributor, a member of one or more project teams, and/or as a leader of one or more project teams, (2) achieved success in their chosen profession as evidenced by career satisfaction, promotions/raises, and leadership at levels appropriate to their experience, and/or (3) achieved success in post-undergraduate studies as evidenced by satisfaction with the decision to further their education, advanced degrees earned, professional registration, and professional visibility (e.g. publications, presentations, awards, etc.) The program is designed to develop within its graduates a basic foundation in wireless engineering and either electrical engineering, software engineering, or communication networks that will provide the technical proficiency needed for the professional practice of engineering in the wireless industry; the ability to communicate their ideas effectively within the technical community and to the general public; the basis for, and an appreciation of and enthusiasm for lifelong scientific inquiry, learning and creativity; and preparation to take their places in society as responsible citizens, with an appreciation of and understanding for the need to maintain the highest ethical standards in their personal and professional lives. Graduates of this program will be able to analyze, develop, design, test, administer and support wireless network systems, communication devices, and other components used in wireless computer and telecommunication networks.

The BWE curriculum has two formal options - wireless engineering-hardware (WIRE), emphasizing a hardware design-oriented approach to wireless engineering, and wireless engineering-software (WIRS), emphasizing a software-oriented approach. There is a network specialization within each option. Students interested in designing wireless hardware, such as integrated circuit chips, wireless communication devices, and wireless network switching equipment, should choose the WIRE hardware specialization option. Students interested in application software development, including server-side, client-side, and embedded applications, should choose the WIRS software specialization option. Students interested in pursuing a career with wireless service providers and other companies that develop and maintain wireless networks and sell service, can choose the Network Specialization within either the WIRE option or the WIRS option.

Each curriculum builds upon a solid foundation in mathematics, science, and electrical or software engineering fundamentals to introduce wireless communications theories, devices, circuits, systems, networks, standards, management, and applications. Design experience is interwoven throughout the curriculum by introducing basic design concepts early, emphasizing hands-on design experiences in the laboratories, including effective use of computers and other modern engineering tools, and culminating with a capstone design project in the senior year. In addition to its technical aspects, the curriculum emphasizes oral and written communication skills, the importance of business, economic, social and global forces on engineering, appreciation of the need to maintain the highest ethical standards, and the maintenance of professional competence through continued self-improvement after graduation.

THE SCHOOL OF FORESTRY AND WILDLIFE SCIENCES has a long tradition of offering educational programs that prepare graduates for employment in a wide variety of natural resource professions. Natural areas, forests and their associated resources play a unique and increasingly important role in contemporary society. They enhance both economic development and environmental quality. The School’s programs emphasize a comprehensive understanding of interrelationships between the functions and values of diverse renewable natural resources. This awareness is essential to effective management and, ultimately, to meeting society’s needs.

In keeping with the University’s land-grant mission, the School’s goals are to pursue excellence in education, research, and extension (including outreach and public service activities) focused on the forests, wildlife, and associated resources of Alabama and the southeastern United States. With respect to undergraduate education, this focus is on preparing graduates who have the necessary skills for initial employment, with the breadth and depth of educational background to support professional growth and continued career advancement. The result of this directed effort from an energized faculty and administration are motivated graduates who have the foundation to master the art and science of managing wild lands for the betterment of both the local and global communities.

If you would like to speak to someone about the programs in the school of Forestry and Wildlife Sciences, please call the Director of Student Services at (334) 844-1050, the Coordinator of Student Recruitment at (334) 844-1094 or send an email to workingwithnature@auburn.edu.

Web Site

Students are encouraged to visit the school’s website (http://www.auburn.edu/sfws) which provides information on the school's programs and faculty, as well as updates on courses, scheduling, practicum details, and events of interest to School.

Course Prefixes for the School of Forestry and Wildlife Sciences

Course prefixes for courses in the School of Forestry and Wildlife Sciences (SFWS) are FORY (forestry), FOEN (forestry engineering), FOPR (forest products), NATR (Natural Resources), WILD (wildlife) and FOWS (SFWS common courses).

Curricula and Options

The School of Forestry and Wildlife Sciences offers undergraduate curricula leading to bachelor of science (BS) degrees in forestry, geospatial and environmental informatics, natural resources management, wildlife ecology and management, and a wildlife sciences-pre-veterinary medicine concentration. A forest engineering option is available under the bachelor of biosystems engineering (BSEN) degree program. It is offered in conjunction with the Samuel Ginn College of Engineering. Links to more information and the curricula models for each of these majors are found at the bottom of this page.

Students in the SFWS with exceptional academic qualifications should also consider enrollment in the University's Honors College. This opportunity is described under Special Academic Opportunities in the Academic Policies section of the Bulletin and carries a number of significant benefits to qualified students.

Accreditation

The bachelor's programs in forestry and the forest engineering option in biosystems engineering (the latter with addition of the forest resources minor) are accredited by the Society of American Foresters (SAF). SAF is the accrediting body recognized by the Council on Higher Education Accreditation as the accrediting agency for forestry education in the United States. Graduation from such SAF-accredited programs is required of all applicants for Registered Forester status in Alabama and several other states. The biosystems engineering program with the forest engineering option is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET). Completion of the wildlife sciences degree program qualifies the graduates for certification as associate wildlife biologists by The Wildlife Society. Completion of the wildlife pre-vet concentration prepares students for continuing to a college of veterinary medicine or other health-oriented study.

Forest Engineering Option

The Department of Biosystems Engineering in conjunction with the Samuel Ginn College of Engineering and the School of Forestry and Wildlife Sciences offers an accredited degree in biosystems engineering with a forest engineering option. Graduates are qualified to pursue Professional Engineering (PE) credentials. To receive a Society of American Foresters accredited degree and be eligible to
become a registered forester in the state of Alabama, students must complete the forest track in Biosystems Engineering and the forest resources minor in the School of Forestry and Wildlife Sciences.

This program is committed to preparing students for productive professional careers in the forest products industry and related natural resource and environmental systems sectors. Specific educational objectives of the program are: 1) graduates solve engineering problems such as those associated with the environment and natural resources, and the production, processing, storage, manufacture, utilization, and recycling of biological products; 2) graduates develop solutions to problems that combine engineering and biological sciences; 3) graduates develop environmentally and economically feasible and practical design solutions; and 4) graduates expand the role of engineering in society, communicate effectively, practice in a professional and ethical manner, and provide leadership in the profession.

The curriculum is coordinated by the Samuel Ginn College of Engineering and the School of Forestry and Wildlife Sciences. Students register in the Samuel Ginn College of Engineering and are assigned academic advisors in Biosystems Engineering and in Forestry. Beginning students should apply to the Samuel Ginn College of Engineering and complete the Pre-Forestry Engineering, program. (See the Samuel Ginn College of Engineering, Department of Biosystems Engineering section for the curriculum model, and detailed admission and degree requirements.)

Military Science

In all curricula within the School of Forestry and Wildlife Sciences, electives may include any number of Basic ROTC or Advanced ROTC. In curricula which do not provide sufficient electives for this purpose, ROTC may be taken in lieu of required courses outside of the major and not in the university core, to be selected with the approval of a School advisor. Common courses selected are Natural Resource Electives in the Wildlife curriculum, and forestry restricted electives.

Admission Requirements and Academic Standards

General Requirements

Freshman eligibility for the School of Forestry and Wildlife Sciences is determined by Enrollment Services. They may be reached at their website or by phone at (334) 844-6425. However, since the requirements for forestry and wildlife education necessitate high school preparatory work of high intellectual quality and considerable breadth, the following program is recommended: English (4 units), mathematics (including algebra, geometry, trigonometry and analytic geometry) (4 units), chemistry (1 unit), biology (1 unit), physics (1 unit), history, literature or social science (2 or 3 units), and foreign languages (1 unit). Freshmen in Forestry are admitted to the Pre-Forestry (PFOR) curriculum. Wildlife Ecology and Management students are admitted directly into the Wildlife Ecology and Management curricula (WLDE) and Natural Resources Management students are admitted directly into the Natural Resources Management curricula (NATR) and Geospatial and Environmental Informatics students are admitted directly into the Geospatial and Environmental curricula (GSEI).

Transfers from other institutions must apply through Enrollment Services. The exact placement of transfer students can be determined only upon review of their transcripts by the Registrar’s Office and the School of Forestry and Wildlife Sciences.

Credit toward a degree in the School of Forestry and Wildlife Sciences will not be allowed for mathematics or chemistry courses at a lower level than those specified in the curriculum for the degree sought. Students who are not prepared to take the courses prescribed should take lower level remedial courses without degree credit.

Transfer Credits

Transfer credit for forestry and wildlife courses not considered equivalent to those required in the chosen curriculum may be substituted for elective credit. However, duplication of credit will not be allowed. Equivalency of forestry and wildlife courses will be determined by the Dean's Office. Students also may obtain credit for FORY, FOWS, GSEI and WILD courses on the basis of validating examinations. Arrangements for validating examinations must be made with the Dean's Office. Transfer credit for upper-division courses in the major (greater than or equal to 3000-level) generally are not accepted for substitution.

Forestry Specific Requirements

The Professional Curriculum in Forestry (FORB) begins with the courses in the School of Forestry and Wildlife Sciences Summer Field Practicum as detailed in the major link at the bottom of this page. ### Watershed Sciences Minor

Watershed science and management is an expanding field that involves managing the availability, quantity, and quality of water. Many major metropolitan areas and smaller cities rely on forested watersheds to purify the necessary drinking water for their populations. Many highly trained and dedicated professionals, knowledgeable in hydrology, climates, and water sciences, are needed in coming years to be certain this necessary commodity is provided to the United States and the world's growing populations.

College of Human Sciences

JUNE M. HENTON, Dean

SUSAN S. HUBBARD, Associate Dean

JENNIFER KERPELMAN, Associate Dean

KOSTELECKY, KYLE, Assistant Dean

Human Sciences is a professional program central to the land-grant mission that draws from the natural and social sciences, the arts and humanities. It integrates and interrelates knowledge from these disciplines to advance the well-being of individuals, families, and consumers. The course of study provides a broad liberal education, specialized career preparation, as well as a background for individual and family living. Areas of specialization focus on aspects of environment, health, consumer products and services, and human development. Human Sciences offers men and women professional and pre-professional preparation for careers in education, business, industry, social agencies, and government.

The College of Human Sciences includes the departments of Consumer and Design Sciences; Human Development and Family Studies; and Nutrition, Dietetics, and Hospitality Management. Programs of study leading to the bachelor of science degree can be planned within six curricula in the College of Human Sciences. These curricula are designed with flexibility to meet the needs of students with a variety of academic interests and goals. Program-specific accreditations/approvals/endorsements/certifications have been attained for several programs.

Transfer Requirements
To transfer into the College of Human Sciences, a student must be eligible to take classes and pursue an Auburn degree. However, students need to be aware of GPA restrictions and other progression requirements as well as admission requirements for individual degree programs.

Graduation Requirements
To earn the bachelor’s degree from the College of Human Sciences, students must complete the hours and subject matter requirements of their curricula and must have a minimum grade-point average of 2.0 on all course work attempted at Auburn University, and in addition, a 2.0 cumulative grade-point average on all work attempted in the major.

Options in Cooperative Extension
Students enrolled in any of the majors in the college may prepare for a career in the Cooperative Extension System through election of certain courses as electives. Majors may fulfill the requirements of the Alabama Cooperative Extension System through scheduling of the following courses:

Consumer and Design Sciences

The Department of Consumer and Design Sciences focuses on consumers’ interactions with their near physical environment. Two majors are offered: 1) Apparel Merchandising, Design and Production Management, and 2) Interior Design. These curricula focus on principles of design, product development, management, marketing science and technology, and consumer behavior. Majors in these curricula may lead to careers in business, industry, and government which apply knowledge to developing, evaluating and merchandising consumer products, interpreting consumers’ wants and needs, informing consumers and designing environmental spaces. A senior-level internship is required in both curricula. Accelerated BS/MS programs are available in AMDP and INDS. Please contact department for additional information.

Apparel Merchandising, Design and Production Management

Apparel Merchandising, Design and Production Management is a professional curriculum with two options: 1) Apparel Merchandising (APME) and 2) Product Design and Production Management (APDP). Diversity within the major allows students to select such varied fields as apparel design, apparel production management, retail sales and/or management, apparel merchandising, retail buying, fashion journalism, and consumer-producer relations. A professionally supervised internship is required. The program is endorsed by the American Apparel and Footwear Association.

Academic Standards and Policies: Students in both AMDP options must earn a grade of a C or higher in all prerequisite courses in the major, and have a cumulative GPA of 2.0, before being allowed to proceed to the next course in the sequence. Major courses include the Human Sciences college core courses and all required Consumer and Design Sciences courses which are indicated in bold print in the models. Students must earn a grade of C or higher on all required courses in the major to complete graduation requirements.

Interior Design

Interior Design is a four-year bachelor of science program accredited by the Council for Interior Design Accreditation (CIDA). The curriculum focuses on the design of the near environment, the aesthetic and functional aspects of space planning, furnishings and materials, lighting and mechanical equipment, and the integration of these aspects of the built environment to fit the needs of the user. A professionally supervised internship is required. Student work from courses in the major may be retained by the program for accreditation and exhibit purposes.

Academic Standards and Policies: Freshman and transfer students admitted to Auburn University, as well as internal transfer students from within Auburn University, who desire to major in Interior Design, College of Human Sciences, will be admitted to Pre-Interior
Design (INDX). The Pre-Interior Design students must complete the first year of Pre-Interior Design course work, i.e., CADS 1000 and CADS 1100 with a grade of “C” or better in order to be evaluated for possible admission into the Interior Design curriculum. Admission into the Interior Design program (sophomore-senior levels) is limited with a maximum class size of 36 students per year. Admission will be based upon a portfolio review by the Interior Design faculty of the work completed in the Pre-Interior Design course work. Students who have earned at least a C in both CADS 1000 and CADS 1100, but who are not selected for the Interior Design program because of class size limitations, may be invited to join the program if a space opens up in the program. Course work in the major must be taken in sequence; transfer students should anticipate that additional semesters of study may be required to complete the program.

Students in INDS must earn a grade of a C or higher in all prerequisite courses in the major before being allowed to proceed to the next course in the sequence. Major courses include the Human Sciences College core courses and all required Consumer and Design Sciences courses which are indicated in bold print in the model.

Apparel Merchandising, Design and Production Management (AMDP)

The accelerated BS/MS in Apparel Merchandising, Design and Production Management (AMDP) degree program will provide an opportunity for highly motivated and academically strong students to gain a depth of understanding of apparel merchandising, design, and product development beyond that of typical bachelor's level graduates. It should make them more competitive in the job market or for additional graduate studies. The program will allow students to achieve a graduate degree in an accelerated period of time.

Students with at least 45 credit hours but no more than 96 and a 3.0 GPA will be eligible to apply for the program. Applications for the accelerated BS/MS in AMDP will consist of plans of study for both the Bachelor of Science in AMDP and the Master of Science in Consumer and Design Sciences. Applications will be due October 1 in the Fall of the Junior Year. Upon approval by the Undergraduate Program Coordinator, the Graduate Program Officer and the Department Chair, students will be admitted to the accelerated program and may register in the 6000-level courses at the appropriate time in their plan of study.

Students will matriculate in the accelerated program at an appropriate time as designated by the plan of study. This would begin in the spring of the junior year of their undergraduate program and continue until the last semester in the normal bachelor's degree program at which time the B.S. degree will be awarded. The Master of Science in Consumer and Design Sciences would be completed in May of the second year in the advanced degree program. On completion of the BS degree, students must apply to the Graduate School and be accepted into the MS program in the Department of Consumer and Design Sciences.

All undergraduate students enrolled in the program will be required to meet with the undergraduate program coordinator each semester before registering. Graduate students will have a major professor directing their thesis research. The Graduate Program Officer is available as needed.

Withdrawal Process: Student may withdraw voluntarily from the Accelerated program by notifying the Graduate Program Officer.

**Human Development and Family Studies**

The Human Development and Family Studies (HDFS) undergraduate curriculum is designed to prepare students for a variety of careers that contribute to the success of individuals and families across the life span. Career directions include, but are not limited to, teaching and administering programs to young children in pre-school or hospital settings, counseling teens in residential treatment facilities or church programs, providing supportive services to adult and elderly populations, implementing family education in the broader community, and advocating for family policy within government settings. Students also gain excellent preparation for graduate school. Majors select one of five concentration areas; Infancy/Preschool, Child Life, Middle Childhood/Adolescence, Adult Programs or Family Life Education. The capstone course for students is the undergraduate internship where classroom learning and real life come together to enhance professional competence. The HDFS curriculum draws upon the knowledge of many academic disciplines to promote understanding of current issues for individuals and families in modern society, and it is approved by the National Council on Family Relations to offer the Provisional Certified Family Life Education (CFLE) designation. The Department also operates the Marriage and Family Therapy Center, the Auburn University Early Learning Center as well as the Harris Early Learning Center in Birmingham, Alabama. Both early learning programs are accredited by the National Association for the Education of Young Children.

"Fingerprint/Criminal Background Checks are required of all HDFS majors. Students who do not obtain the required background check clearing letters will not be allowed to enroll in courses."

Dual Objective Program: The Dual Objective Program with Human Development and Family Studies and the Early Childhood Education program in the College of Education is open to students in Human Development and Family Studies. Students completing this dual objective program earn the bachelor of science in the declared major from the College of Human Sciences and are eligible for an Alabama Class B teachers certification. Transferring into a teacher education program requires a minimum 2.5 GPA on all college coursework attempted and on all coursework attempted at Auburn.

Academic Standards and Policies: Students must earn a grade of C or better on all required HDFS major core classes at the 3000-level or higher to complete graduation requirements.

Students must have a 2.25 cumulative GPA to enroll in HDFS 3010, HDFS 3030, HDFS 3060, HDFS 3080 and HDFS 4680. A "C" grade or better must be earned in each course taken toward the minor and each must be an HDFS course.

Note: A student cannot use the same course to fulfill the requirements of both their major and their minor. If a course has been completed to meet the requirements of their major, the student must select an alternate course from the elective courses above to meet the requirements of their minor.

Note: If a student has taken this course to fulfill requirements of the School/College core or the major, it cannot count toward the minor. In this case, the student must select an additional three hour course from the electives above.

**Nutrition, Dietetics, and Hospitality Management**

The Department offers two majors: Hospitality Management (HOSP) and Nutrition (NTRI). The HOSP major emphasizes food, lodging and event services for consumers in the tourism and hospitality industry. The HOSP major offers two study options: Hotel and Restaurant Management (HRMG) and Event Management (EVMT). The NTRI major offers three study options: Nutrition/Dietetics (NDI), Nutrition Science (NSPM) and Nutrition/Wellness (NTWE).

**Hospitality Management**

The Hospitality Management Major prepares students for careers in hotels, resorts, culinary, restaurants, the event sector and other positions in the tourism and hospitality industry. With its focus on instructional research and outreach initiatives, the Hospitality Management program’s mission is to educate exceptional leaders for the State of Alabama and the global hospitality and tourism industry. Faculty concentrate on service excellence, social and ethical responsibility, diversity and inclusion in a practically oriented and intellectually stimulating learning environment.

The major offers students two exciting study options to choose from, including (1) Hotel and Restaurant Management, and (2) Event Management.

**Hotel and Restaurant Management Option**

The Hotel and Restaurant Management (HRMG) option is designed to prepare graduates for careers in the premium service segment of the hospitality industry. This focus makes the Auburn HRMT program nationally unique. The HRMT curriculum provides career preparation for hotel management and food and beverage (restaurant) management, including private club management.

**Event Management Option**

The Event Management option is designed to service the educational needs of those students seeking to advance their careers in the event management field. As is the case both nationally and globally, this sector now makes a significant contribution to the socio-economic wellbeing of the state of Alabama and the nation. The event management curriculum focuses on the planning, execution and evaluation of a myriad of special events including, family, social, sporting, historical, musical and food and beverage oriented.

Academic standards and policies: Students must earn a “C” in all required courses in the Hospitality Management Major. Students must earn a “C” or higher in all pre-requisite courses in the major.
Nutrition
The field of nutrition is concerned with human physiology and biochemistry and their relationship to human health, diet, and well-being. The NTRI curriculum has three options which permit specialization according to students’ specific interests.

Nutrition Science Option
The Nutrition Science option prepares students for health professional schools, such as medical, dental, and physical therapy, as well as for graduate study in the nutrition discipline. The Nutrition Science option serves as a pre-med option.

Nutrition/Dietetics Option
The Nutrition/Dietetics option is designed to prepare students interested in completing the requirements to become credentialed as a Registered Dietitian (RD) and Registered Dietitian Nutritionist (RDN). This option prepares students for careers in clinical nutrition, community nutrition, public health, nutrition education and counseling, foodservice management, and food and nutrition in industry.

Graduates who successfully complete the Didactic Program in Dietetics are qualified to apply for a post-baccalaureate supervised-practice program, which is a requirement for eligibility to take the National Registration Examination for Dietitians and earn the RD/RDN credential. The Auburn University’s Didactic Program in Dietetics is accredited by the Accreditation Council for Education in Nutrition and Dietetics of the Academy of Nutrition and Dietetics, 120 South Riverside Plaza, Suite 2000, Chicago, IL 60606-6995, (312) 899-0040 ext. 5400. Http://www.eatright.org/ACEND (http://bulletin.auburn.eduHttp://www.eatright.org/ACEND).

Academic Standards and Policies: Freshmen and on and off campus transfer students who desire to major in Nutrition/Dietetics will be admitted to Pre-dietetics (NTDX). To be eligible for consideration for admission to the didactic program in dietetics, applicants must successfully complete at least 45 semester hours of the pre-dietetics curriculum courses, including:

NTRI 2000/2003/2007 Nutrition and Health and

4 of the following 6 science courses:

CHEM 1030/1031 Fundamentals of Chemistry I
CHEM 1040/1041 Fundamentals of Chemistry II
CHEM 2030 Survey of Organic Chemistry
BIOL 1020/1021 Principles of Biology
BIOL 2500 Anatomy and Physiology I
BIOL 2510 Anatomy and Physiology II

Students must successfully complete the lower-division pre-dietetics prerequisite courses as outlined below with a minimum GPA of 2.8 on a 4.0 scale. No grade lower than a “C” will be accepted in any prerequisite course (BIOL 1020/1021, BIOL 2500, BIOL 2510, CADS 2000, CHEM 1030/1031, CHEM 1040/1041, CHEM 2030, HDFS 2000, NTRI 2000 (2003 or 2007), NTRI 2070, PSYC 2010.)

Criteria for admission include pre-dietetics cumulative GPA, science GPA, and student’s personal statements and career goals. Due to the limited number of seats, achievement of minimum standards does not ensure admission into the Didactic Program in Dietetics.

Program Application: Pre-dietetic students must formally apply to the DPD typically during the second semester of the sophomore year. Application materials will be posted to the nutrition/dietetics website. Students will be notified of admission decisions in writing. Students accepted to the DPD must pre-register for the appropriate courses for the upcoming fall semester.

Nutrition/Wellness Option
The Nutrition/Wellness option prepares students for careers in health-related settings. Graduates find positions in non-profit health organizations, hospital-based and corporate-based programs, and federal, state and local health agencies.

Course work in the major must be taken in sequence. On and off campus transfer students should anticipate that additional semesters of study may be required to complete the program.

College of Liberal Arts

JOSEPH AISTRUP, Dean
PAULA BOBROWSKI, Associate Dean for Research and Faculty Development and Graduate Studies
CHARLES A. ISRAEL, Associate Dean for Academic Affairs
GIOVANNA SUMMERFIELD, Associate Dean for Educational Affairs

Majors in Liberal Arts prepare students for immediate employment after receiving undergraduate degrees, for example, as journalists, public relations experts, archivists, interpreter/translators, curators, social scientists, counselors, fine arts and entertainment industry professionals, education support specialists, management professionals, or technical communicators. Students also receive strong academic backgrounds for graduate study or professional education. The College of Liberal Arts consists of four academic areas, each of which is divided further into departments:

- Humanities: English, Foreign Languages and Literatures, History, and Philosophy, awarding Bachelor of Arts degrees.
- Fine Arts: Art, Music, and Theatre, awarding Bachelor of Arts, Bachelor of Music, and Bachelor of Fine Arts degrees.
- Communication: Communication Disorders and Communication and Journalism, awarding Bachelor of Arts and Bachelor of Science degrees.
- Behavioral and Social Sciences: Economics, Political Science, Psychology, and Sociology, Anthropology, and Social Work, awarding Bachelor of Arts and Bachelor of Science degrees.

Becoming a Liberal Arts Major

Entering a Major: Incoming freshmen and external transfer students are admitted directly to the College of Liberal Arts. The following majors have additional admission requirements beyond university admission: Art-BFA, Communication, Communication Disorders, Health Services Administration, Journalism, Music, Public Relations, Media Studies, Social Work, Theatre-BFA. Students should contact the department that houses their intended major to determine specific entrance requirements.

Declaring a Major: All students must declare a major by the end of the semester in which they complete 65 semester hours of credit, including transfer and other college credit. Students transferring into the College of Liberal Arts with 65 or more semester hours of credit must declare a major upon admission. Before a major is declared, students will follow the requirements for the College of Liberal Arts and will be identified as pre-majors in a curriculum or by the designation UNLA for undeclared students.

Required Courses for All Liberal Arts Majors

Most majors in the College of Liberal Arts require students to complete a one-year sequence in a foreign language. Students are placed into each sequence based on results of a placement exam administered by the Department of Foreign Languages and Literatures prior to their enrollment at Auburn. Students pursuing BFA degrees in Art and Theatre are exempted from the foreign language sequence requirement.

Policies for Dual Degrees and Double Majors

To earn a second baccalaureate degree, students must complete a separate body of knowledge appropriate for the degree. The Dean's Office in the College of Liberal Arts determines when it is possible for students to earn a second baccalaureate degree. Auburn University academic policy stipulates the minimum hours necessary in addition to the primary degree or curriculum. The College of Liberal Arts requires that, at a minimum, 30 additional hours of non-overlapping course work must be accomplished in the second baccalaureate degree program.

To earn a double major, students must complete all the major courses in both majors. Of these major courses, at least 20 hours of each major must be unique, rather than being used as major, support, or core courses in both majors. If at least 20 hours of unique courses do not exist for each of the two majors, students cannot pursue a double major.

For complete information on dual degrees and double major requirements, please see the Academic Policies section.

Special Academic Opportunities

To augment the learning experiences available through majors in the College of Liberal Arts, students can take advantage of the following possibilities:
• **Dual Degrees with the College of Engineering.** Students can receive a degree from a Liberal Arts major and a degree from a major in the Samuel Ginn College of Engineering. To ensure that all requirements are met, students should see advisors in both colleges. Typically, five to six academic years are necessary to complete dual degrees.

• **Pre-Law Study.** Most majors in Liberal Arts are accepted by law schools as appropriate preparation for the study of law. However, students should consult with the pre-law advisor in Haley Center 7002 in preparing for law school admission and the study of law. The pre-law advisor will suggest the most useful courses to take.

• **Pre-Health Study.** Most majors in Liberal Arts are accepted as preparation for professional degrees in health, including medicine, dentistry, optometry, physical therapy, and occupational therapy. Generally, students will need to take particular courses in science, mathematics, and philosophy as their university core requirements. They will also need to take additional courses in science and mathematics not required by most Liberal Arts majors and attend a Pre-Health Professional Orientation course offered during fall semester. To ensure they complete the necessary requirements and to get assistance in applying to graduate or professional programs in health fields, students should meet with the pre-health advisors in the College of Science and Mathematics. Students should also consult with advisors in the College of Liberal Arts and in the departments that house their majors.

• **Teacher Certification through the College of Education.** Students holding baccalaureate degrees in English, history, French, or Spanish may gain teaching certification through enrolling in the Alternative Master’s Certification Program in the College of Education. Upon successful completion of the program, students are awarded a master’s degree in education (MEd), and they will be eligible to apply for Alabama Class A certification (master’s level certificate).

• **University Honors College.** Students with extraordinarily high academic aptitude can receive individual learning opportunities through the Honors College. For more information, see the “Academics Policies” section.

• **Study Abroad.** Students can gain course credit either through class instruction or internship in Study Abroad programs. For more information, students can contact the Office of International Programs or the departments / colleges that house these Study Abroad opportunities.

• **Cooperative Education Programs.** Students receive opportunities to integrate classroom education with work experience in Cooperative Education Programs. Students alternate each semester between attending classes and working for companies. Cooperative Education Programs are available in the Departments of Art, English (Professional Writing and Public Writing track), Political Science (Health Services Administration and Public Administration majors) Psychology, and Sociology, Anthropology, and Social Work. Interested students should contact the director of the Cooperative Education Program.

• **The Caroline Marshall Draughon Center for the Arts and Humanities.** Students may be interested in the programs and other activities sponsored through the Caroline Marshall Draughon Center for the Arts and Humanities. As described on its website, the mission of the Center is “to strengthen the bonds between the College of Liberal Arts and the public by creating and implementing arts and humanities programs that explore our individual and collective experiences, values, and identities through the past, in the present, and for the future. The Center also creates occasions and space for dialogue, intellectual community, and cross-disciplinary scholarship.”

Art and Art History

The Department of Art and Art History prepares students for careers as artists and for careers in visual arts institutions. The Department of Art and Art History is an accredited member of the National Association of Schools of Art and Design and a member of the College Art Association.

The Department of Art and Art History offers three majors: a Bachelor of Arts (formal option in Art History), a Bachelor of Arts in Studio Art, and a Bachelor of Fine Arts in Studio Arts. The BA in Art History is for students who want an art history education within the liberal arts curriculum. Students elect art history courses in four groups and complete a capstone project in methodology and history. Students in this major have great flexibility in their choice of electives, enabling them to access a broad array of courses within the university. The BA in Art is for students who want a studio art education within the liberal arts tradition. Students elect studio courses in several areas rather than a single concentration. The BFA in Studio Art is a professional degree that allows students to concentrate in one area: painting, sculpture, photography, printmaking, or ceramics. The Department of Art and Art History also offers minors in both Studio Art and Art History.

BFA students in Studio Art must complete an advisory review during their sophomore year. The following are required for the review:

- Completion of 23 credit hours of studio art and art history courses. Students should check with the department for a list of courses.
- Submission of a BFA review application form.
- Submission of a written statement of academic and career goals.
- Submission and presentation of a portfolio of artwork.
- Participation in an evaluative meeting with a committee of designated Department of Art faculty.

In all Fine Arts curricula, electives may include six hours Basic ROTC or Advanced ROTC. In curricula that do not allow for six hours of electives, ROTC may be taken in lieu of required courses with approval of the departmental adviser. University core courses may not be replaced by Basic or Advanced ROTC.

2 Students must earn a C and maintain a 2.5 grade-point average in all courses that count toward the minor.

Communication Disorders

The undergraduate major in Communication Disorders is a pre-professional health care degree that prepares students to enter graduate programs in the communication disorders of either speech-language pathology or audiology. To become nationally certified speech-language pathologists or audiologists, students must earn a graduate degree. The Bachelor of Science undergraduate degree also can be used for employment as a speech-language pathology aide in the public schools of some but not all states. The BS degree, however, is intended for students who are capable of and committed to enrollment in an accredited graduate program in the field.

Students must comply with these requirements to be admitted to the Communication Disorders major:

- Students must apply for admission to the major. Students’ applications for admission must be received by January 30 in order for them to begin the major during the following summer term. Applications must be received by May 30 in order for students to begin the major during the following fall semester. Applications may be submitted any time prior to the deadline. Students may get information about the applications process and the appropriate forms from Haley Center 1199, Department of Communication Disorders or online at the departmental website www.cla.auburn.edu/communicationdisorders/. The top 30 applicants are accepted in each of two admission cycles during the year.
- They must have completed 30 hours of course work in the university core courses and have at least a B average in English Composition I and II.
- Students must submit a 300-word letter of intent.
- They should check with the department chair or program coordinator for further information about entry requirements.

Once they are admitted to the BS Communication Disorders, students have to meet these requirements in order to graduate:

- Students must earn a C or higher in each major course. Any courses where students do not receive a C or higher must be repeated. Under these circumstances, graduation may be delayed.
• Students must have a 3.0 GPA to enroll in CMDS 4910 Clinical Practicum.

**Economics**

Majors from the Department of Economics pursue careers in business, banking and finance, government, and consulting. They are also prepared to enter graduate or professional programs in economics, law, business, or public policy. The department offers a Bachelor of Science in Economics with a primary and a quantitative track. The primary track requires students to complete a minor outside of the Department of Economics. The quantitative track is intended for students with a strong interest in pursuing graduate education in economics, and it requires additional mathematics and statistics courses. Students should check with a departmental adviser for requirements in the quantitative track.

Students must maintain at least a 2.0 GPA in major courses to graduate.

**Major**

History

The curriculum in History at Auburn endeavors to teach students both knowledge of the past and skills in the research and communication of that knowledge. As such, the Bachelor of Arts in History can serve as a sound foundation for graduates to pursue a number of career options. Auburn graduates in History have gone on to a diverse range of careers that include public history and archives, historic preservation, secondary education, public administration, law, military service, politics, and a range of business careers. While some students go on to teach history in schools and a small number pursue graduate education in history, most graduates are spread through career paths representing the broad possibilities that come with a well-developed ability to ask clear questions, research the information and sources necessary to construct an answer, write factually and persuasively, and think historically.

Students should check with their academic advisor to declare a History major.

Once they are admitted to the BA in History, students must meet these requirements:

- All History majors should take HIST 3800. Historian’s Craft as early as possible in their academic program after completing core history. Students must complete the course before enrolling in History courses above the 3000 level.
- Students must earn a grade of C or higher in HIST 3800 before taking HIST 4950 Senior Thesis.
- All students must complete a course at the 2000 level or above that is focused on a non-European, non-American topic.
- To graduate, students must earn a minimum 2.0 GPA overall and in the History major.

Music

The Department of Music offers the Bachelor of Arts and Bachelor of Music degrees. Considered a professional degree by the National Association of Schools of Music, the Bachelor of Music degree prepares students for graduate study in music performance, for professional careers as performers, and for careers as applied music teachers. Other potential jobs can be found in churches, commercial music business, arts administration, and some private schools.

The Department of Music works in cooperation with the College of Education to provide course offerings for music education degrees. Students in music education must audition for placement in the required applied lessons.

The Department of Music provides qualified and interested students, regardless of their major, with a variety of music experiences. Performance groups, such as the Marching Band, Symphonic Band, Concert Band, Campus Band, Orchestra, Jazz Band, Percussion Ensemble, Chamber Choir, Concert Choir, Men’s Chorus, Women’s Chorus, University Singers, Gospel Choir, and various smaller music ensembles are available to all students. Many performance groups require a successful audition before admission.

Students must comply with these requirements to be admitted to the BA or BM in Music:

- Students must apply for admission.
- They must successfully complete an instrumental or vocal audition. Information about the audition is available from the departmental office.

Once they are admitted to a degree program in music, students have to meet these requirements in order to graduate:

- Students must earn a grade of C or higher in all music courses in order for those courses to count toward degree requirements.
- Students taking private instruction (MUAP) must successfully complete auditions before enrollment and must concurrently enroll in MUSI 1000 Performance Attendance. Information is available from the departmental office.

In all Fine Arts curricula, electives may include six hours Basic ROTC or Advanced ROTC. In curricula that do not allow for six hours of electives, ROTC may be taken in lieu of required courses with approval of the departmental adviser. University core courses may not be replaced by Basic or Advanced ROTC.

Sociology, Anthropology, and Social Work

The Department of Sociology, Anthropology, and Social Work offers three Bachelor of Arts degrees. Sociology graduates have found positions in law enforcement agencies such as the Drug Enforcement Agency, the military, and social service agencies. Some have chosen to pursue graduate or professional education in sociology, social work, criminology, and social forestry, among others. The Sociology major provides students a solid foundation within the discipline, particularly in theory, research methods and statistics, and human diversity. Anthropology graduates have found positions in cultural resource management and archaeology. Some have chosen
to pursue graduate or professional education in anthropology and development studies. The Anthropology major takes a four-field approach, offering courses in archaeology, physical anthropology, cultural anthropology, and linguistic anthropology. ### Theatre

Students graduating with degrees from the Department of Theatre find employment as actors, theatre technicians, administrators, and/or educators. The Department of Theatre provides instruction and production experience for students interested in developing their talents in the theatre arts, whether as majors or non-majors. Consequently, a broad range of classroom, laboratory, and performance experiences is provided in acting, directing, music theatre, dance, scenic and lighting design, costume design, theatre technology, construction and crafts, theatre history, dramatic literature, music theatre, theatre criticism, theatre administration, and management.

The Department of Theatre offers a Bachelor of Arts in Theatre and a Bachelor of Fine Arts in Theatre. The BA in Theatre is designed for students seeking to study theatre within the liberal arts curriculum. This degree is for students who choose to study theatre as a humanistic discipline or who wish to concentrate in theatre history, criticism, dramatic literature, dramaturgy, and directing. It is excellent preparation for more specialized training in graduate school or conservatory. The BFA in Theatre is designed for students who have specific professional goals in mind. It is for students seeking professional training in an intensive program in a single concentration—performance, music theatre, design/technology, or management.
**BA in Theatre**

To graduate with a BA in Theatre, students must earn a grade of C or higher in all theatre courses. Any course with a grade below a C must be repeated.

**BFA in Theatre**

Students must comply with these requirements to be admitted to the BFA in Theatre:

- Students must formally apply for admission to the BFA in Theatre.
- Students entering the BFA options in Design/Technology, Management, and Performance typically apply for admission in the spring of their sophomore year.
- Students entering the BFA option in Music Theatre audition in the fall semester prior to their freshman year.
- Application is through portfolio review (Design/Technology and Management options) or audition (Performance and Music Theatre options).

Once they are admitted to the BFA, students have to meet these requirements in order to graduate:

- Students must earn a grade of C or higher in all theatre courses. Any course with a grade below a C must be repeated.
- Continuance in the BFA degree tracks is subject to review each semester by faculty.
- Final recommendation for graduation is made after the successful presentation of a performance recital or the successful execution of a design or major production project during the student’s final year. The success of a performance recital, design, or production model is determined by the Department of Theatre faculty.

In all Fine Arts curricula, electives may include six hours Basic ROTC or Advanced ROTC. In curricula that do not allow for six hours of electives, ROTC may be taken in lieu of required courses with approval of the departmental adviser. University core courses may not be replaced by Basic or Advanced ROTC.

**BFA Curriculum in Theatre - Music Theatre**

The **BFA in Music Theatre** is a four-year degree track that offers practical, pre-professional skills in acting, dancing, and singing for the student whose ambition is to be a professional actor and musical theatre artist. In the first two years of the program, students study voice in private sessions, music theory and skills, piano, speech, music theatre acting, ballet, jazz and tap. Both the Performance and Music Theatre degree tracks combine a liberal arts education with applied skills in performance that will serve the undergraduate actor seeking graduate school placement or professional employment.

All members of our acting faculty are professional actors with years of experience in the industry as well as terminal degrees in their field.

Theatre majors must earn a grade of C or higher in theatre courses, or they must repeat those courses for credit toward their degrees.

Majors

Options

Engineering

This program provides for enrollment in the Liberal Arts Curriculum and in the Samuel Ginn College of Engineering. Two degrees will be awarded: a bachelor of arts degree in the liberal arts major and a bachelor's degree in the designated engineering field. Students should receive dual advising through the Colleges of Liberal Arts and Engineering. Typically, five to six academic years are necessary to complete dual requirements.

Pre-Law

Most majors and curricula are accepted as preparation for the study of law. Courses deemed useful, and which may be taken as electives, in majors, and in some cases to fulfill certain core requirements, are available from the pre-law program, located in 7002 Haley Center, where students receive advice on preparing for law school admission and the study of law.

Pre-Health

Most majors and curricula in Liberal Arts are accepted as preparation for professional degrees in health, including advanced degrees from schools of medicine, dentistry, optometry, physical therapy, occupational therapy and others. Generally, particular courses in the sciences, mathematics and philosophy should be taken in the University Core. Additional sciences and mathematics may be needed as electives. The university's pre-health advisor should be consulted for elective and core course guidance and for assistance in applying to graduate/professional schools. The liberal arts advisor is available for all other matters related to the student's undergraduate studies.
Auburn University

School of Nursing

GREGG E. NEWSCHWANDER, Dean
FRANCINE M. PARKER, Associate Dean

THE SCHOOL OF NURSING, established in 1979, offers a program of study leading to the bachelor of science in nursing. The nursing curriculum prepares beginning professional nurse generalists who are capable of functioning as members of the healthcare team in providing care for individuals and groups in diverse settings. The program also provides an educational base for advancement in formal study, research and practice. The facilities and resources of the university are used to provide a broad academic background in the humanities and sciences. Graduates are eligible to make application to the NCLEX-RN examination to become registered nurses.

A pre-professional program in Nursing Science is required of students seeking admission to the professional curriculum. The first two years of course work are designated Pre-Nursing (PNUR). The Professional Curriculum requires five terms including 1-2 summer terms, depending on the semester of admission. The Curriculum includes classroom, laboratory and clinical experiences.

Admission

Freshman eligibility is determined by the Office of Enrollment Services. Admission requirements are stated elsewhere in this Bulletin. High school mathematics, chemistry and biology courses are strongly recommended, along with other college preparatory courses in social science, history, literature and English composition. Students are strongly encouraged to see the academic advisor in the School of Nursing on a regular basis.

Transfers from other institutions must apply through the Office of Enrollment Services. Review of transcripts by the School of Nursing will determine the amount of credit allowed for the pre-nursing requirements. Students planning to transfer from other universities are encouraged to contact the School of Nursing as soon as possible for advisement on transfer of credits. Students must possess the functional ability to perform the skills and behaviors required of a professional nurse. These abilities include but are not limited to:

1. Adequate vision, such as that required to observe changes in physical conditions, to read small print on labels and markings on syringes, and to discern subtle changes in color;
2. Adequate hearing, such as that required to distinguish muted sounds through a stethoscope;
3. Fine motor skills and manual dexterity, such as that required to handle small, delicate equipment;
4. Strength to turn and assist with lifting adults, and to lift and carry children;
5. The mobility to respond quickly in emergency situations;
6. The ability to communicate and interact effectively with others, orally and in writing;
7. The ability to detect odors; and
8. The ability to read independently and to comprehend the written word.

Professional Program

Admission to the professional program occurs in both Fall and Spring. Pre-nursing students must formally apply for admission to the professional program, typically during the sophomore year, and meet the deadlines and requirements for each admission cycle. To be eligible for consideration for an interview and admission, applicants must have completed at least 3 of the 5 required science courses in the pre-nursing curriculum and have no more than 22 hours of pre-nursing coursework outstanding. Criteria considered for admission include unadjusted pre-nursing GPA, science GPA, number of hours completed at Auburn, successful completion (C or better) of all pre-nursing requirements and interview score. While the GPA to be considered for an interview is an overall unadjusted GPA of 2.5 or higher, interviews will be granted based on the overall unadjusted GPA of the pool of applicants and in reality a higher GPA may be required to interview. Applicants will be interviewed only once each academic cycle. If not accepted for admission at the time of their interview, applicants can reapply the next admission cycle by completing a new application. In this case, the applicant’s original interview score will be used. Due to limited enrollment, all students who meet minimum requirements may not be interviewed or admitted.

Application forms will be posted on the School of Nursing website by December 1 for Fall admission and March 1 for Spring admission. The deadline for completing an application is February 1 for fall admission and May 1 for spring admission. Interviews for fall admissions are the first Saturday in March and for spring admission the first or second Saturday in June. Students will be notified of admission decisions in writing by April 1 for fall admission and July 1 for spring admission. Those applicants admitted must successfully complete all pre-nursing courses with a C or higher by the end of summer semester for fall admissions and by the end of fall semester for spring admissions.
Application for RN Licensure

Following completion of the registered nursing program, the graduate will apply for RN Licensure in Alabama or another state. The Alabama Board of Nursing application has the following questions which must be answered by the applicant:

1. Have you ever been arrested or convicted of a criminal offense other than a minor moving traffic violation?
2. Have you within the last five years abused drugs/alcohol or been treated for dependency to alcohol or illegal chemical substances?
3. Have you ever been arrested or convicted for driving under the influence of drugs/alcohol?
4. Have you within the last five years received inpatient or outpatient treatment or been recommended to seek treatment for mental illness?
5. Have you ever had disciplinary action or is action pending against you by any state board of nursing?
6. Have you ever been placed on a state and/or federal abuse registry?
7. Have you ever been court-martialed/disciplined or administratively discharged by the military?

If an applicant has answered yes to any of the above questions, a full explanation with the appropriate court/treatment records must accompany the application. Applicants must disclose misdemeanors and arrests that didn’t not result in convictions. Arrests/convictions include checks written on accounts with insufficient funds and DUls.

If the Board later learns of arrests or convictions that have not been disclosed, this will be considered fraud and deceit in procuring a license, and disciplinary action will be forthcoming.

Applicants to the School of Nursing need to be aware that they may be denied permission to take the RN licensing examination by the Alabama Board of Nursing if they are not of good moral character. A past record of behavior such as a felony conviction, abuse of drugs or alcohol, or theft of drugs may be grounds for denial of licensure. See Section 610-X-8-.01 of the Alabama Board of Nursing Administrative Code.

Academic Regulations

Advanced placement credit in pre-nursing courses is granted according to university policies stated elsewhere in the Bulletin. No advanced standing is allowed in the natural sciences by the School of Nursing. Proficiency examinations or Advanced Placement (CEEB), with accepted score, may be used for advanced placement.

An overall GPA of 2.0 must be maintained for progression through the professional program. Pre-nursing students who do not attain an overall GPA of at least 2.5 at the end of their freshman year should consider alternative fields of study.

A minimum grade of C is required in pre-nursing courses. Transfer credit will not be granted for courses in which a grade less than C is earned.

In the professional program, a minimum grade of C, or Satisfactory in all courses, must be achieved. Because the professional nursing curriculum is designed for progressive development of nursing knowledge and skills, students who earn an Unsatisfactory or grade less than C in a professional program course are not allowed to progress to the next clinical course. The course in which the student earns a grade less than C or Unsatisfactory may be repeated one time only. Students who earn a grade less than C or Unsatisfactory in two or more professional program courses or whose GPA falls below a 2.0 will be dropped from the professional program and are not eligible for readmission. Transfer credit is not generally allowed for courses in the professional program.

The Professional Program

Facilities

The School of Nursing is housed in Miller Hall, where an auditorium, The Attilio Corte Assessment laboratory, faculty offices and the Dean's suite are located. Classes are held in buildings across campus. Facilities for clinical nursing experiences include East Alabama Medical Center and other hospitals in the area, Mental Health Centers, clinics, nursing homes, physicians' offices, Public Health Departments, public schools and industrial sites. Students are responsible for complying with policies and procedures required by agencies in which clinical work is done.

Expenses

Students accepted into the professional program should expect to incur additional expenses including a professional fee associated with the clinical courses. Uniforms, equipment, transportation to clinical sites, smart phone devices with the capability of retrieving required information, laptop with designated specifications, standardized exams and software, NCLEX reviews, a health examination and liability and health insurance coverage are among the requirements. Students are required to have a drug screening test and are
required to undergo a background check. The costs of such requirements will be the responsibility of the students. Detailed information is furnished by the dean’s office at the time of admission.

Accreditation
The School of Nursing operates with full approval of the Alabama Board of Nursing and is fully accredited by the Commission on Collegiate Nursing Education, One Dupont Circle NW, Suite 530, Washington, DC 20036-1120, (202) 887-6791, http://www.aacn.nche.edu/ccne-accreditation.

**TOTAL HOURS - 125-127**

Curriculum guides for the junior and senior year vary according to semester of admission to professional program.

1. Students must choose between PSYC 2010 or SOCY 1000 for at least 3 hrs if their social science credit.

2. Must have History sequence and one Literature course OR a Literature sequence and one History course.

3. Students who have AP or transfer credit for US History must complete one of the following: ECON 2020, ECON 2030, POLI 1050, or POLI 1090 as a social science.

**Students must make a "C" or better in all PNUR and NURS courses**
THE AUBURN Doctor of Pharmacy (PharmD) degree program is a four-year course of study that requires the completion of the pre-pharmacy curriculum prior to enrollment. The curriculum is designed to facilitate the development of those abilities necessary for entry-level practitioners in various practice settings. Consistent with accreditation standards and guidelines, the curriculum provides an appropriate balance of course work in the following areas: biomedical sciences (basic and clinical); pharmaceutical sciences; behavioral, social, and administrative pharmacy sciences; pharmacy practice; and pharmacy practice experience. The goal of the curriculum is to prepare students who are ready to enter practice at the time of graduation and are life-long learners. To accomplish this, the curriculum involves students in continuous patient care responsibilities starting upon entry into the School. Students also participate as active, self-directed learners in interdisciplinary teaching models.

Admission

Course requirements for admission to the James Harrison School of Pharmacy may be satisfied by completing the Pre-Professional Curriculum in the College of Sciences and Mathematics. Any or all of these requirements may be met by transfer of appropriate credit from other institutions.

Admission is limited and is contingent upon available facilities and faculty. To be considered for admission the applicant must have a satisfactory GPA and satisfactory scores on the Pharmacy College Admissions Test (PCAT). A grade of D in any prerequisite course will not be accepted. Students are matriculated into the James Harrison School of Pharmacy only during fall semester. All pre-pharmacy course work must be completed by the end of the summer term before the professional program begins at the start of fall semester.

Applicants must apply to the James Harrison School of Pharmacy through the Pharmacy College Application Service (PharmCAS) and must also complete the School's Supplemental Application. The James Harrison School of Pharmacy admits students using a rolling admissions process and student applications are prioritized in the order in which they are received. The final deadline for receipt of all application materials is March 1. Students who are successful in meeting the school’s initial screening criteria are required to come to the campus for a personal interview in order to be further considered for admission.

The James Harrison School of Pharmacy’s Doctor of Pharmacy Program admits students to two campuses: the main Auburn Campus and the Mobile Campus located at the University of South Alabama. Students may express a preference for a specific campus, but assignments are made based on available space. Admitted students are notified of their campus assignment at the time an offer of admission is made.

Prospective students may obtain application materials and information, which further outlines policies and procedures, from the school’s website at www.pharmacy.auburn.edu or by contacting the Office of Academic and Student Affairs, 2316 Walker Building, Auburn, AL 36849-5501. Applications through PharmCAS are submitted online at http://www.pharmcas.org/.

**Doctor of Pharmacy**

A copy of the revised Doctor of Pharmacy Curriculum is attached to this proposal.

File: Revised PharmD Curriculum.pdf

The revised curriculum will be phased in over 4 years

During the implementation process, there will be Doctor of Pharmacy students in both the current curriculum and in the revised curriculum.

- Year 1 Pharmacy Curriculum - FALL 2017 (Students in Years 2, 3 & 4 will remain in the current curriculum)
- Year 2 Pharmacy Curriculum - FALL 2018 (Students in Years 3 & 4 will remain in the current curriculum)
- Year 3 Pharmacy Curriculum - FALL 2019 (Students in Year 4 will remain in the current curriculum)
- Year 4 Pharmacy Curriculum - FALL 2020 (All students will be in the revised PharmD curriculum)

**NOTE:** A new course prefix (PYPD) that is unique to courses in the revised Doctor of Pharmacy Program has been created. Courses in the existing curriculum will continue to use the PYDI prefix (for the most part) while courses in the new curriculum will use the new PYPD prefix (for the most part). This will enable the faculty, staff, students, and other stakeholders to quickly and easily keep track of which courses are associated with the current curriculum and which are associated with the revised curriculum.

**Academic Performance Standards**

The implementation of all guidelines will be in addition to those existing policies and standards of the University.

To remain in good standing, students are required to achieve a James Harrison School of Pharmacy GPA of at least 2.25. GPAs will be calculated only from professional course work, which is defined as core pharmacy courses approved by the faculty and listed in the Doctor of Pharmacy curriculum.

The James Harrison School of Pharmacy students with semester or cumulative GPAs below 2.25, or who receive Ds and Fs in required courses, may be dismissed from the James Harrison School of Pharmacy or required to undergo a remedial plan of study as directed by the Committee on Academic Requirements and Professionalism. The remedial plan of study may require students to retake courses in which they received grades of less than C. Policies concerning academic progression, probation, and dismissal are specified in the...
James Harrison School of Pharmacy’s Academic Performance Standards. A copy of the Standards may be obtained from the James Harrison School of Pharmacy’s Office of Academic and Student Affairs or from the School’s website.

Students must observe pre-requisites and co-requisites stated in the current Auburn University Bulletin. A pre-requisite statement denoting “-year PYDI standing” indicates that the student must have passed all courses in the prior year of the curriculum.

Notes:

• Students are required to file an application with the Alabama State Board of Pharmacy for registration as an intern at the time they are enrolled in the James Harrison School of Pharmacy. Information and intern registration forms may be obtained from the Alabama State Board of Pharmacy, 111 Village Street, Hoover, AL 35242, or at www.albop.com. Students must maintain a valid Alabama Internship License as a condition of continued enrollment in the James Harrison School of Pharmacy.

• Upon entering pharmacy school, and at the beginning of each academic year, students are required to furnish documentation of professional liability insurance, current CPR and First Aid certification, personal medical insurance and up-to-date immunizations. Students who fail to maintain documentation will be dis-enrolled and will not be allowed to re-enroll until current documentation has been provided.

• Pharmacy students are required to attend the Professional Seminar Series.

• Students in the Doctor of Pharmacy program are required to own a laptop computer that meets the school’s specifications. Questions about computer specifications should be directed to the School’s Office of Information Technology. Computer literacy must be demonstrated upon entry to pharmacy school.

• Students are required to adhere to all of the James Harrison School of Pharmacy’s codes, policies, and professional requirements. The School will take disciplinary action against those students who violate such codes, policies, and professional requirements.

• Students will be required to periodically take examinations to assess their ability to integrate the knowledge, skills, and attitudes learned to date. Students may be required to complete remedial course work should their performance be unsatisfactory.

• Consistent with the policies of Auburn University, The James Harrison School of Pharmacy reserves the right to make changes at any time in its academic programs, codes, policies, and professional requirements.

• Students will be notified of their site assignments for the Advanced Practice Experiences at the earliest feasible time, to enable them to make housing arrangements. Rotation sites are located throughout Alabama, western Georgia, the Mississippi Gulf Coast, and the Florida panhandle. Although students may request specific sites, each site has a limited enrollment and students may be assigned to sites they do not request. Students are responsible for procuring housing, including the assessment of its safety and living conditions. Students are also responsible for housing and other living expenses incurred when assigned to rotation sites away from the Auburn campus.

THE COLLEGE OF SCIENCES AND MATHEMATICS provides programs in the physical sciences, life sciences, and mathematics at the undergraduate and graduate levels. The college also offers scientific and mathematical service courses for students enrolled in all of the other colleges and schools. The college includes the departments of Biological Sciences, Chemistry and Biochemistry, Geosciences, Mathematics and Statistics, and Physics. The Arboretum and the Leach Science Center are also included in the College of Sciences and Mathematics.

Undergraduate Degrees

1. Four-year bachelor’s degree programs are offered in two areas:
   a. Departmental curricula are available in actuarial sciences, biomedical sciences, biochemistry, chemistry, clinical laboratory and medical sciences, geography, geology, microbiology, molecular biology, marine biology, mathematics, applied mathematics, organismal biology, and physics.
   b. Pre-professional curricula are offered in pre-dentistry, pre-medicine, pre-optometry, pre-physical therapy, pre-pharmacy, pre-physician assistant and pre-veterinary medicine.
   Embodied in these curricula are the requirements of the University Core Curriculum.

2. Admission - The academic requirements and demands on majors in sciences and mathematics necessitate a high school preparation of high intellectual quality. The following courses are recommended as minimum preparation: English, four units; mathematics (including algebra, geometry, trigonometry and pre-calculus), four units; chemistry, one unit; biology, one unit; history, literature, social science, two or three units. Both physics and foreign language are highly recommended.

Students not prepared for MATH 1610 must first take a lower-numbered course. See advisor for details.

On-campus transfers may declare a major in the College of Sciences and Mathematics if they: (1) have a cumulative Auburn grade-point average of at least 2.0 (on all work attempted) and (2) have completed at least 10 hours of Auburn University course work in the desired major with at least a 2.0 grade-point average in all such courses. Courses in the major are those carrying the appropriate prefix(es) of the specific curriculum. Students not meeting these standards may enroll in the Undeclared Sciences and Mathematics (UNSM) curriculum. Students in the UNSM curriculum may declare a Sciences and Mathematics major after satisfying the above requirements. A student who enters the UNSM curriculum because he or she is not qualified to declare a major can remain in UNSM for a maximum of one year or until senior standing is reached. After this, if the student is still not qualified to declare a major, he or she will be disenrolled from the College of Sciences and Mathematics.

Graduate Degrees

Master of science and doctor of philosophy degrees are offered in the College of Sciences and Mathematics. Degree programs are described in this Bulletin.
