**EAGLES Program**

The **Education to Accomplish Growth in Life Experiences for Success, or EAGLES Program**, is a comprehensive transition program (CTP) (http://www.education.auburn.edu/higher-education-opportunity-act-heoa-of-2008-comprehensive-transition-programs/) for students with intellectual and developmental disabilities. The program provides a post-secondary education opportunity for students with intellectual disabilities to engage in a **two-year (four-semester) or four-year (eight-semester)** residential campus experience.

It is a non-degreed program focusing on (1) academic enrichment, (2) personal and social skills, (3) independence, (4) **health and wellness**, and (5) **integrated** work experiences. Students in the program receive an inclusive post-secondary education providing them with an enriching and rewarding Auburn experience as they prepare for life now and in the future.

**Inclusive Elementary Education Practices - Graduate Certificate**

The program requires 15 hours of coursework. Everyone in the program will complete six hours of required coursework. Key assessments will be included in each class which will be used for program evaluation. Students will select nine additional hours of coursework from a given list.

ENGINEERS ARE FACED with worldwide problems and expectations awesome in responsibility, yet exciting as professional challenges. These range from the extremes of interplanetary exploration through earth orbiting systems to the problems arising from our population explosion: energy, better productivity, housing, transportation and environmental issues.

As a renewed appreciation develops for the contributions of science and technology, engineering leaders are calling for engineers who are better equipped to tackle the specific, technical problems of the future. They also are calling for engineers who by breadth of education and understanding of other disciplines can convince others of the role of engineers not only in technical matters but in policy decisions to ensure the use of technology to benefit mankind.

Engineering education at Auburn provides in a four-year curriculum both the technical knowledge and the broad general education necessary to equip engineers for their problem-solving challenges. Centered on mathematics and the physical sciences, the curricula also stress the importance of social sciences, humanities and communication skills. Auburn’s engineering programs enable individuals to develop their natural talents and provide knowledge, skills and understanding that will help them to find their places in society as well as in their vocations.

Admission

Freshmen eligibility is determined by the Office of Enrollment Services. However, since the requirements for engineering education necessitate high school preparatory work of high intellectual quality and of considerable breadth, the following program is recommended as minimum preparation: English, four units; mathematics (including algebra, geometry, and trigonometry), four units; chemistry, one unit; history, literature, social science, two or three units. Calculus, physics and foreign languages are recommended but not required.

Transfers from other institutions must apply through the Office of Enrollment Services. The exact placement in courses can be determined only upon review of the student’s transcript by the Samuel Ginn College of Engineering. See Admission of Transfer Students for complete requirements.

The college allows credit for courses completed with satisfactory grades provided the courses correspond in time and content to courses offered at Auburn. Courses that are taught at the 3000-level or higher at Auburn are generally not transferable from junior colleges.

Many courses required by the Samuel Ginn College of Engineering are highly specialized in their content and potential transfer students need to select courses with care. Therefore, to ensure maximum transferability of credits, students are encouraged to contact the College as soon as possible about acceptable credits.

Transfers from on-campus must be approved by the Samuel Ginn College of Engineering. The requirements for a student to advance from the pre-engineering program into an engineering curriculum are subsequently described in the “Scholastic Requirements” section.

Programs

Pre-Engineering

The Pre-Engineering Program consists of a freshman program of studies to prepare students for curricula in the Samuel Ginn College of Engineering. It also provides academic and career counseling to assist students in determining the curriculum that best fulfills their personal and educational objectives.

The following describes the requirements for entering freshmen pre-engineering students to move into major. These requirements must be completed by the end of the fourth semester enrolled at Auburn, not including summers.

- Completion of two calculus courses
- Completion of two science courses required by major
• Completion of COMP 1200 Introduction to Programming or COMP 1210 Fundamentals of Computing I
• Completion of ENGR 1100 Orientation to Engineering and ENGR 1110 Introduction to Engineering
• Sophomore standing, the completion of 30 hours
• 2.0 cumulative GPA

Professional Programs

The undergraduate Computer Science program is accredited by the Computing Accreditation Commission of ABET, http://www.abet.org.

These curricula are designed to meet the educational requirements of the engineering professions. The program in the fundamental sciences of mathematics, chemistry and physics is followed by a study of basic engineering sciences. Specialized or departmental courses are taken in the third and fourth years. Flexibility is provided in all degree programs through electives so that the individual may emphasize areas of personal interest.

An ecological engineering option and a forest engineering option are available under the biosystems engineering program. The forest engineering option is offered jointly by the Department of Biosystems Engineering and the School of Forestry and Wildlife Sciences. The environmental science curriculum is offered jointly by the College of Agriculture, the College of Engineering, and the College of Sciences and Mathematics.

Cooperative Education
The Cooperative Education Program is offered in all curricula of the Samuel Ginn College of Engineering. Refer to the program information in the Special Academic Opportunities section of the Bulletin. For additional information, contact: Cooperative Education (Co-Op) Program, 303 Mary Martin Hall, Auburn, AL, 36849. Telephone: (334) 844-4744. Website: career.auburn.edu/coop/.

Graduate
The Samuel Ginn College of Engineering offers masters (thesis and non-thesis) and PhD degrees in aerospace engineering, biosystems engineering, chemical engineering, civil engineering, computer science and software engineering, electrical and computer engineering, industrial and systems engineering, materials engineering, mechanical engineering, and polymer and fiber engineering. The college offers additional masters degrees including the master of engineering management, master of engineering (interdisciplinary), MS in cybersecurity engineering, and MS in data science and engineering (joint with the College of Sciences and Mathematics). The college also offers a dual-degree master of industrial and systems engineering and master of business administration.

Continuing Education
The Engineering Online and Continuing Education Office extends the resources of the Samuel Ginn College of Engineering to the people, businesses and industries of the state. Programs in this service are technical assistance, short courses, conferences, workshops and seminars. For more information, contact: Director, Engineering Online and Continuing Education Programs, 217 Ramsay Hall, Auburn, AL 36849.

Online Courses
The college offers graduate-level courses for credit and non-credit to off-campus students through its Graduate Outreach Program. Graduate-level courses are recorded in the classroom on the Auburn campus and delivered to off-campus students via streaming video. Students enrolled in the program are required to do the same homework assignments and take the same exams as the on-campus students enrolled in the course. For information on admission to the program, fees, course offerings and other particulars, write to Engineering Online and Continuing Education Programs, 217 Ramsay Hall, Auburn, AL 36849 or call (334) 844-5807.

Degree Requirements
To earn the bachelor’s degree in the Samuel Ginn College of Engineering, students must complete the subjects in the curriculum, have a minimum grade-point average of 2.0 in all work attempted at Auburn University and have a cumulative grade-point average of 2.0 on
courses passed in the major at Auburn. The major is defined as all course work shown in bold print on the relevant curriculum model. It is the student's responsibility to keep informed of course requirements and scheduling. Failure to do so may jeopardize graduation.

Military Science

All curricula in the Samuel Ginn College of Engineering permit the use of six hours of basic or advanced ROTC courses passed at Auburn University. For the options, see the specific curriculum. For programs that do not have sufficient electives, credit will be determined on an individual basis. ROTC courses cannot be substituted for university core courses or courses required by the major except as specified in the curriculum model.

Department of Aerospace Engineering

Aerospace engineers are concerned with the application of scientific principles and engineering concepts and practices to design, build, test and operate aerospace systems. The curriculum is intended to provide students with a broad understanding of fundamental scientific and technological principles, and to develop the ability to use these principles in developing solutions to engineering problems.

The objectives of the aerospace engineering program are: (1) to help students develop written and oral communication skills and to acquire a knowledge of history, literature and society; (2) to provide students a solid foundation in and a sound working knowledge of basic engineering principles; (3) to help students obtain an understanding of the engineering principles and skills specifically needed in the aeronautical and astronautical disciplines; and (4) to assist and encourage each student to develop an enhanced ability to learn and think creatively.

Required courses cover aeronautical and astronautical subjects. Students may also choose to emphasize either aeronautical or astronautical systems. Technical electives allow concentration in such areas as aerodynamics, astronautics, flight dynamics and control, propulsion, structures, and structural dynamics. The design of aerospace components and systems is considered to be an integral part of the education of aerospace engineers. Hence, design is included throughout the curriculum, beginning with a sophomore course in aerospace fundamentals and culminating in the senior design course sequence. Students are required to apply their theoretical knowledge of aerodynamics, dynamics, structures and propulsion to solve open-ended problems and to produce portions of preliminary designs.

The AU Bulletin lists the University Core Curriculum requirements for students in the College of Engineering. Students must complete a sequence in either Literature or History.

Department of Biosystems Engineering

Biosystems Engineers ensure that we have the necessities of life: healthy food to eat, clean water to drink, renewable fuel and energy sources, and a healthy environment in which to live. Therefore, the mission of the Department of Biosystems Engineering at Auburn University is to develop and disseminate engineering knowledge to solve problems in biological systems, natural resources and the environment. It meets the resident instruction portion of that mission through the offering of a degree program which leads to a Bachelor of Biosystems Engineering (BSEN), and another degree that leads to Bachelor of Science in Biological and Agricultural Technology Management (BATM). The four pathways to the BSEN degree program (Biosystems Engineering pathway, Bioprocess Engineering Option, Ecological Engineering Option, and Forest Engineering Option), and the BATM degree program are described below.

Biosystems Engineering

The Department of Biosystems Engineering offers the only accredited degree in Biosystems Engineering in Alabama. It is committed to preparing students for productive professional careers in the biosystems industries and related natural resource and environmental systems sectors. Specific program educational objectives of the Biosystems Engineering degree program can be found at:

http://eng.auburn.edu/bsen/academics/undergraduate/educational-objectives.html

The Biosystems Engineering program curriculum pathway is coordinated by the Samuel Ginn College of Engineering. Students should apply for admission to the Samuel Ginn College of Engineering and complete the Pre-Biosystems Engineering program.

Bioprocess Engineering Option

The focus of the Bioprocess Engineering option is to produce engineers that seamlessly combine engineering and natural sciences to designing and developing systems, processes and equipment that convert biological and agricultural materials to value-added products such as food, nutraceuticals, polymers and pharmaceuticals. Bioprocess engineers provide a bridge between the research lab and the economic, large-scale implementation of technologies used to convert these biological materials to value-added products. The bioprocess engineering option is coordinated by the Samuel Ginn College of Engineering. Students should apply for admission to the Samuel Ginn College of Engineering and complete the Bioprocess Engineering option portion of the Pre-Biosystems Engineering program.

Ecological Engineering Option

The Department of Biosystems Engineering offers an option in Ecological Engineering as part of the Bachelor of Biosystems Engineering degree. This option prepares students to solve environmental problems by applying engineering knowledge to natural ecological and biological systems. Ecological engineering combines basic and applied science from engineering, ecology, economics, and natural sciences to design, construct, and manage sustainable ecosystems that have value to both humans and the natural environment. The ecological engineering option is coordinated by the Samuel Ginn College of Engineering. Students should apply for admission to the Samuel Ginn College of Engineering and complete the Ecological Engineering option portion of the Pre-Biosystems Engineering program.

Forest Engineering Option

The Department of Biosystems Engineering in conjunction with the Samuel Ginn College of Engineering and School of Forestry and Wildlife Sciences offers an option in Forest Engineering as part of the Bachelor of Biosystems Engineering degree.

This forest engineering option involves preparing graduates to be able to apply of engineering principles and techniques for sustainable management and maintenance of trees, soil, water and other natural resources with the forest ecosystem. Forest engineering is therefore a hybrid of engineering, forest and management that is focused on efficient, cost-effective and environmentally-friendly utilization of these resources. Therefore, this option prepares students for productive professional careers in the forest products industry and related natural resource and environmental systems sector.
The Forest Engineering option is coordinated by the Samuel Ginn College of Engineering and the School of Forestry and Wildlife Sciences, and is administered by the Department of Biosystems Engineering. Students can become registered foresters upon completion of a minor in forest resources. Beginning students should apply to the Samuel Ginn College of Engineering and complete the Forest Engineering option portion of the Pre-Biosystems Engineering program. Students pursuing the Forest Engineering option must meet School of Forestry and Wildlife Sciences requirements for admission to the Forestry Summer Field Practicum.

**Biological and Agricultural Technology Management**

Students enrolled in the Biological and Agricultural Technology Management (BATM) major will take a variety of courses in technology, science and management that will enable them to be practical problem solvers, and be able to manage and develop solutions to the technological challenges of the increasingly complex agricultural and biological systems of the 21st century. The curriculum is also designed such that students can simultaneously obtain a minor in Agronomy and Soils, Stewardship-based Agriculture, Agribusiness, information Systems Management, Technical and Professional Communication, Poultry Science or Business Analytics. The BATM curriculum is coordinated by the College of Agriculture.

Chemical Engineering

Chemical engineers contribute to society through the useful application of knowledge and understanding of chemistry, physics, biology, and mathematics. Chemical engineers traditionally have participated in many decisions crucial to the preservation and improvement of society, including energy, fuel, commodity chemical and food production, resource management, and the design of necessary pollution control measures. Emerging new areas such as biotechnology, space technology, nanofabrication technology, semiconductor devices and modern construction materials also utilize the unique capabilities of the chemical engineer. Many technologies to improve public health depend significantly on chemical engineering such as biomaterials, biomedical devices, medical diagnostics, the chemical design and synthesis of drugs, the genetic engineering of therapeutic materials, drug delivery systems and medical imaging technology. Finally, chemical engineering plays an essential role in important environmental technologies such as atmospheric chemistry, product life cycle analysis, bioremediation, environmental risk and impact analysis, environmental friendly manufacturing technology and products, separation and conversion technologies for waste reduction and the cleanup of contaminated sites.

The instructional mission of the department is to provide its chemical engineering graduates with the tools, skills and competencies necessary to understand and apply today’s technologies and, through life-long learning, successfully develop and employ tomorrow’s technologies.

The Program Educational Objectives and Student Outcomes can be found at the following URL:
http://www.eng.auburn.edu/chen/academics/undergraduate/educational-objectives-outcomes.html

Because of their broad training and education, chemical engineers contribute to society in many functions, such as pure research, development, environmental protection, process design, plant operation and manufacturing, marketing, sales, and corporate or government administration.

The program is specially designed to assure all students have demonstrated capabilities in the core chemical engineering topics including material and energy balances, thermodynamics, chemical equilibria, heat, mass and momentum transfer, chemical reaction
engineering, continuous and stagewise separation operations, process dynamics, statistics and control. The design experience is interwoven throughout the curriculum from elementary design principles in material and energy balances to the capstone senior process design and process control sequence employing advanced computer process and control simulators and experimental control systems.

The curriculum is specifically designed to enable graduates to model and design chemical and physical processes, design and conduct experiments, analyze and interpret chemical engineering data, and to determine capital and operating costs for chemical and physical processes. The curriculum prepares graduates to understand the need for professional integrity and ethical decision making in the practice of chemical engineering as well as providing an understanding of contemporary issues including business practices, environmental, health, and safety and other public interests. Students are also prepared for graduate study in chemical engineering, medicine, business and law.

Because of the breadth of chemical engineering opportunities, the department offers a number of specially designed program specializations that provide unique training and course selection to those students who wish to concentrate in a particular area or technology. The current program specializations are biochemical engineering, biomedical engineering, computer-aided chemical engineering, environmental chemical engineering, pre-medicine specialization and pulp, paper and bio-resource engineering.

The AU Bulletin lists the University Core Curriculum requirements for students in the College of Engineering. Students must complete a sequence in either Literature or History. Because of the discipline specific requirements for the Humanities courses, it is recommended that a History sequence be completed in the Social Sciences courses.

Electives, Technical Electives: See adviser for approved course listing. At least three (3) hours of Technical Electives must be coursework considered as Engineering Topics.

CHEM 1110, 1111, 1120 and 1121 are preferred, but CHEM 1030, 1031, 1040 and 1041 are acceptable substitutes. Honors sections of all courses will be accepted for this curriculum.

Civil Engineering

• Functioned as efficient, reliable team members in the evaluation, planning and design, construction, or operation and maintenance of civil infrastructure systems,

• Demonstrated their belief in lifelong education by expanding their body of knowledge, maturing professionally, and progressing toward licensure as professional engineers,

• Assumed leadership roles in their workplace by exercising initiative and responsible stewardship, and

• Employed the human touch in engaged involvement in their professions and communities.

Civil Engineering Specializations

Civil engineering is a broad field of study. All students that pursue the Bachelor of Civil Engineering degree are required to take introductory courses in surveying, construction engineering, geotechnical engineering, environmental engineering, hydraulics, structural analysis, transportation engineering, and civil engineering materials. Beyond these courses, students satisfy curriculum requirements by selecting elective courses to broaden their civil engineering knowledge while strengthening their understanding in specific areas. Students may choose to focus on one of the following specializations:

• Construction Engineering

• Environmental Engineering

• Geotechnical Engineering

• Pavements and Materials Engineering

• Site Engineering and Land Development

• Structural Engineering

• Transportation Engineering

• Water Resources Engineering

Construction Engineering Specialization

Construction engineers plan, oversee, and manage the construction efforts associated with building new or rehabilitating existing buildings, bridges, roads, and other facilities. The Construction Engineering specialization provides future construction engineers and managers with the ability to manage construction projects. It also develops the ability to collaborate with other civil engineering professionals to solve problems associated with projects and understand the engineering science to effectively implement the solutions. This specialization provides a strong fundamental background for graduate study in construction engineering and project management.

1 The AU Bulletin lists the University Core Curriculum requirements for students in the College of Engineering. Students must complete a sequence in either Literature or History. Because of the discipline-specific requirements for the Humanities courses, it is recommended that a History sequence be completed in the Social Sciences courses.

2 Breadth electives, technical electives, the science elective, and the senior design project must be selected from lists of approved courses available from the Department of Civil Engineering. Each student must take a breadth elective in at least three of the seven specialty areas: construction, environmental, geotechnical, pavements and materials, structural, transportation, and water resources engineering.

## Computer Science and Software Engineering

### Software Engineering

The focus of the software engineering curriculum, which leads to the bachelor of software engineering, is on the analysis, design, verification, validation, construction, application, and maintenance of software systems. The degree program prepares students for professional careers and graduate study with a balance of computer science theory and practical application of software engineering methodology using modern software engineering environments and tools. The curriculum is based on a strong core of topics including software modeling and design, construction, process and quality assurance, intelligent and interactive systems, networks, operating systems, and computer architecture. The curriculum also enriches each student’s general education with a range of courses from science, mathematics, the humanities and the social sciences. Through advanced elective courses, the curriculum allows students to specialize in core areas of computer science and software engineering. Engineering design theory and methodology, as they
apply to software systems, form an integral part of the curriculum, beginning with the first course in computing and culminating with a comprehensive senior design project, which gives students the opportunity to work in one or more significant application domains. The curriculum also emphasizes oral and written communication skills, the importance of ethical behavior, and the need for continual, life-long learning. The overall educational objectives of the Software Engineering program are for graduates of the program to attain success in their chosen profession and/or post-undergraduate studies.

**Computer Science**

The computer science curriculum, which leads to the bachelor of science in computer science degree, provides an excellent preparation for students seeking careers as software professionals and in computing-related fields, as well for those planning to pursue graduate study. The curriculum builds on a strong foundation in science, mathematics, social sciences, humanities and computer science with advanced course work in theoretical computer science, human-computer interaction, and net-centric computing. Course work ensures that students receive hands-on exposure to a variety of computer systems, tools and techniques. Elective courses allow students to specialize in core areas of computer science such as networking, database systems, and artificial intelligence. In addition, students select a concentration of 9 semester credit hours outside computer science (e.g., business, mathematics, physics, etc.). This concentration enriches students’ educational experience and adds breadth of knowledge by providing an opportunity to explore a second field of study to which computer science can be applied. The curriculum also emphasizes oral and written communication skills, the importance of ethical behavior, and the need for continual, lifelong learning. The overall educational objectives of the Computer Science program are for graduates of the program to attain success in their chosen profession and/or post-undergraduate studies.

The undergraduate Computer Science program is accredited by the Computing Accreditation Commission of ABET, http://www.abet.org.

**Computer Science (online)**

The Bachelor of Computer Science (CPSC) program prepares students for careers as software professionals and in computing-related fields via an entirely online distance-education-based curriculum. The curriculum builds on a foundation of science, mathematics, social science, and humanities. It provides basic coursework in computer software development and theoretical foundations of computer science. This is followed by advanced coursework in computer systems, software engineering, and applications development, including web software design, database, and mobile applications development (such as smartphone and tablet software). The curriculum is rounded out by advanced electives in areas such as wireless and mobile networks, parallel computing, computer architecture, and formal languages.

The program can be completed in two ways: (1) as a second bachelor’s degree, requiring only the 60 hours of CPSC content outlined in the curriculum model, or (2) as a first bachelor’s degree, by completing the other requirements outlined in the curriculum model in addition to the CPSC content. These other requirements can be completed either by transfer credit or by completing the relevant Auburn University courses either online (if available) or on-campus. Courses from the CPSC curriculum cannot be transferred to any other graduate or undergraduate program in the Samuel Ginn College of Engineering. Likewise courses from the on-campus Computer Science and Software Engineering department programs, such as Computer Science (CSCI), Software Engineering (SWEN), and Wireless Engineering, Software Option (WIRS) cannot be given transfer credit in the CPSC program. Students in the CPSC program do not have to take the pre-engineering required courses.

The CPSC content is delivered online in the form of recorded presentations, multimedia content, websites, programming exercises, quizzes and examinations, online discussions, and any other electronic means the instructor finds appropriate. The courses are offered in eight-week terms, with five terms per year. The start dates of the five terms are roughly: start of fall semester, middle of fall semester, start of spring semester, middle of spring semester, and during summer semester. Each 8-week course is worth 3 semester credit hours. Thus, taking two courses per 8-week term would correspond in workload to taking four courses on-campus during a regular semester. An 8-week online 3-credit-hour CPSC course will have the same academic work load as an on-campus 3-credit-hour course (roughly twice as many hours per week as a fall or spring semester course). Whereas an on-campus student is expected to complete an average of 3-3.5 hours of academic work per week over the length of a 15 week semester, a student in the CPSC degree program will be expected to complete an average of 6-7 hours of academic work per week over the length of an 8 week semester. Students are expected to watch all recorded content in a timely fashion, interact with the instructor and teaching assistants as needed via electronic means, and complete and submit all assignments electronically. A student must have access to a computer on which they can access the internet to view content, complete programming assignments, download and install needed software, and access remote resources such as virtual machines necessary to complete some programming projects and lab assignments.

1. Students must complete a sequence in either Literature or History. Because of the discipline specific requirements for the Humanities courses, it is recommended that a History sequence be completed in the Social Sciences courses.

2. Courses for COMP Elective, Math Elective, Core Science Sequence, Science Elective, or Concentration credit must be chosen in accordance with CSSE department policies and approved course listings. Students must consult with the CSSE Academic Advisor when selecting these courses.
The Humanities / Social Science Elective must be chosen from the set of courses designated as Humanities or Social Sciences in the Auburn University Core Curriculum.

The AU Bulletin lists the University Core Curriculum requirements for students in the College of Engineering.

The course in bold-face are those used to calculate in-major GPA.

Electrical and Computer Engineering

The Electrical and Computer Engineering curricula produce well-educated graduates prepared to practice engineering at a professional level in an era of rapid and challenging technological development. The educational objectives of the Electrical Engineering curriculum include developing within our graduates a basic foundation in seven fundamental areas of electrical engineering (circuits and systems, electromagnetics, electronics, digital systems, communications and signal processing, control systems, and power engineering) to provide the technical proficiency needed for the professional practice of electrical engineering. The educational objectives of the Computer Engineering curriculum include developing within our graduates a basic foundation in both electrical engineering (circuits and systems, electronics, and digital systems) and computer science to provide the technical proficiency needed for the professional practice of computer engineering, including the design and application of computer components and systems. In addition, both curricula have as educational objectives to develop within our graduates the ability to communicate their ideas effectively to technical and non-technical audiences and work effectively in multidisciplinary teams, to prepare them to take their places in society as responsible citizens, and to provide them with the basis for, and instill within them an appreciation of and enthusiasm for, lifelong scientific inquiry, learning and creativity.

The goal of the professional portion of each curriculum is to emphasize basic areas of study while providing the flexibility to accommodate a diversity of interests and talents. To this end, each curriculum emphasizes engineering design, hands-on laboratory experience, knowledgeable use of digital computer systems, oral and written communication skills, the importance of business, economic, social and global forces on engineering, appreciation of the need to maintain the highest ethical standards, and the maintenance of professional competence through continued self-improvement after graduation.

Each curriculum builds upon a solid foundation in mathematics and science. In the Electrical Engineering curriculum, topics in the seven fundamental areas of electrical engineering are introduced early and are carefully coordinated to provide the principles necessary for the practice of electrical engineering. In the Computer Engineering curriculum, fundamental topics in both electrical engineering and computer science are introduced early and are carefully coordinated to provide the principles necessary for the design and application of computer components and systems. In each case, design experience is interwoven throughout the curriculum by introducing basic design concepts early, emphasizing design experiences in the laboratories, and culminating with a capstone design project in the senior year. The senior year elective structure provides students with the flexibility to pursue a range of career options.

Industrial and Systems Engineering

Industrial and Systems Engineers plan, design, implement, and analyze systems. This engineering discipline is where technology, people, business and information intersect. The degree provides graduates with broad, flexible career opportunities with manufacturing, consulting, service or governmental organizations. The degree can also provide the foundation and background for further studies in engineering and business as well as professions such as law or medicine. The curriculum builds on a solid engineering mathematics and science core and adds courses manufacturing, ergonomics and safety, operations research, statistics, quality control, engineering economics, simulation, and information technologies. The curriculum graduates students who have:

- An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
- An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
- An ability to communicate effectively with a range of audiences
- An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
- An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
- An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
- An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

1. The AU Bulletin lists the University Core Curriculum requirements for students in the College of Engineering. Students must complete a sequence in either Literature or History. Because of the discipline specific requirements for the Humanities courses, it is recommended that a History sequence be completed in the Social Sciences courses.

2. ENGR 2050, ENGR 2200, ENGR 2100, MECH 2110, MATL 2100 (ENGR 2100 must be taken if completing Automotive Minor).

3. Any 3-hour ISE course not required for major or COMP 5000, ELEC 5150, MATL 3100, MECH 2220, MECH 5510, STAT 4610, STAT 4620, STAT 4630, STAT 5630, STAT 5670, STAT 5690, or a course with ISE department approval.

4. Six hours of ROTC required courses can be substituted for the ENGR and one TECH Elective. Three hours of minor or major required courses in BET, Nuclear, Supply Chain, Computer Science, or Information Systems Management count as one TECH elective.

5. General Note: Bold classes represent major classes. Total Hours for degree = 120, (P) Denotes courses required to complete pre-engineering.

6. Grade of C or better is required in these courses.

### Nuclear Power Generation Systems Minor

This 16-hour minor prepares Auburn engineering students for careers specializing in the support and service of America’s nuclear power generation industry. Students who complete this minor will have demonstrated an understanding of the industry’s basic construction techniques, power plant models, integration into the national electrical grid and common reactor plant operations. Coursework for the minor will take place in the classroom as well as on-site at nuclear power generating facilities, and will
be led by faculty and nuclear industry leaders. Areas of emphasis include: regulation, safety, reliability and dependability, radiological health and work control practices, and training requirements for operators and maintenance technicians.

**Mechanical Engineering**

The curriculum in Mechanical Engineering focuses on the analysis, design, manufacturing, and maintenance of mechanical components and systems. Emphasis is placed on the fundamental concepts of engineering science and design needed in a variety of industries, including automotive, aerospace, biotechnology, material and chemical processing, microsystems and sensors, nanotechnology, machinery and robotics, pharmaceutical, energy production and distribution, heating and refrigeration, food production and processing, entertainment, pulp and paper, weapons systems, and many others. Mechanical engineering students take courses in several areas of engineering including: mechanics of rigid and deformable solids, thermo-fluid sciences, energy systems, dynamic systems and controls, design and manufacturing, materials, and electronics.

In compliance with the Engineering Accreditation Commission (EAC) of ABET, the Department of Mechanical Engineering at Auburn University has developed and maintained a well-defined set of Program Educational Objectives to assure the quality of our program and graduates. These objectives are broad statements that describe the career and professional accomplishments that the mechanical engineering degree program is preparing the graduates to achieve a few years after graduation. The objectives are consistent with the needs and expectations of the program constituencies, and are reviewed and updated regularly using an annual assessment process. The current program educational objectives are:

- Our graduates have rewarding careers where they use their technical proficiency and mechanical engineering education for the professional practice of mechanical engineering or any other career path they choose.
- Our graduates contribute to their chosen field by effectively leveraging a broad array of professional skills such as oral and written communication, leadership, and teamwork.
- Our graduates are life-long learners through a variety of means including self study, continuing education courses, and graduate level education.
- Our graduates maintain awareness of a broad range of contemporary issues and global concerns especially as they relate to the field of mechanical engineering.

Students are able to concentrate on areas of special interest through technical elective courses taken in the senior year. In addition, specialized concentrations are offered in Additive Manufacturing, Automotive Engineering, and Pulp and Paper Engineering. **Materials Engineering**

The curriculum in Materials Engineering (MATL) is structured to address problems associated with the design of materials and materials processes to meet specific needs for a variety of industries. Emphasis is on the basic sciences and principles of engineering with applications of these principles to materials behavior. The student must obtain a broad foundation in chemistry, physics and mathematics, which is applied in engineering courses. Within materials engineering courses, students obtain a foundation in the major areas of materials science and to the major classes of engineering materials, which is applied in courses in materials properties and selection, computational methods and in a capstone design course. Students gain in-depth experience in another engineering discipline through coordinated technical elective sequences. Students may design alternative cross-disciplinary sequences, but they must be coordinated and approved by the Materials Engineering Curriculum Committee. The objective of the MATL program is to produce graduates who are engaged in careers through which they apply materials engineering proficiency, effective communication and lifelong learning to provide technical, economic, or other benefits to society.

Wireless Engineering

The wireless engineering curriculum is a joint offering of the Department of Electrical and Computer Engineering and the Department of Computer Science and Software Engineering, leading to the bachelor of wireless engineering (BWE). To meet the need for engineers that can improve life and business in these times of a mobile society, the program has the following educational objectives. Within a few years of graduation, alumni of the wireless engineering program are expected to have (1) contributed positively to the development and application of new wireless technologies and systems as an individual contributor, a member of one or more project teams, and/or as a leader of one or more project teams, (2) achieved success in their chosen profession as evidenced by career satisfaction, promotions/raises, and leadership at levels appropriate to their experience, and/or (3) achieved success in post-undergraduate studies as evidenced by satisfaction with the decision to further their education, advanced degrees earned, professional registration, and professional visibility (e.g. publications, presentations, awards, etc.) The program is designed to develop within its graduates a basic foundation in wireless engineering and either electrical engineering, software engineering, or communication networks that will provide the technical proficiency needed for the professional practice of engineering in the wireless industry; the ability to
communicate their ideas effectively within the technical community and to the general public; the basis for, and an appreciation of and enthusiasm for lifelong scientific inquiry, learning and creativity; and preparation to take their places in society as responsible citizens, with an appreciation of and understanding for the need to maintain the highest ethical standards in their personal and professional lives. Graduates of this program will be able to analyze, develop, design, test, administer and support wireless network systems, communication devices, and other components used in wireless computer and telecommunication networks.

The BWE curriculum has two formal options - wireless engineering-hardware (WIRE), emphasizing a hardware design-oriented approach to wireless engineering, and wireless engineering-software (WIRS), emphasizing a software-oriented approach. There is a network specialization within each option. Students interested in designing wireless hardware, such as integrated circuit chips, wireless communication devices, and wireless network switching equipment, should choose the WIRE hardware specialization option. Students interested in application software development, including server-side, client-side, and embedded applications, should choose the WIRS software specialization option. Students interested in pursuing a career with wireless service providers and other companies that develop and maintain wireless networks and sell service, can choose the Network Specialization within either the WIRE option or the WIRS option.

Each curriculum builds upon a solid foundation in mathematics, science, and electrical or software engineering fundamentals to introduce wireless communications theories, devices, circuits, systems, networks, standards, management, and applications. Design experience is interwoven throughout the curriculum by introducing basic design concepts early, emphasizing hands-on design experiences in the laboratories, including effective use of computers and other modern engineering tools, and culminating with a capstone design project in the senior year. In addition to its technical aspects, the curriculum emphasizes oral and written communication skills, the importance of business, economic, social and global forces on engineering, appreciation of the need to maintain the highest ethical standards, and the maintenance of professional competence through continued self-improvement after graduation.

School of Forestry and Wildlife Sciences

JANAKI ALAVALAPATI, Dean

THE SCHOOL OF FORESTRY AND WILDLIFE SCIENCES has a long tradition of offering educational programs that prepare graduates for employment in a wide variety of natural resource professions. Natural areas, forests and their associated resources play a unique and increasingly important role in contemporary society. They enhance both economic development and environmental quality. The School’s programs emphasize a comprehensive understanding of interrelationships between the functions and values of diverse renewable natural resources. This awareness is essential to effective management and, ultimately, to meeting society’s needs.

In keeping with the University’s land-grant mission, the School’s goals are to pursue excellence in education, research, and extension (including outreach and public service activities) focused on the forests, wildlife, and associated resources of Alabama and the southeastern United States. With respect to undergraduate education, this focus is on preparing graduates who have the necessary skills for initial employment, with the breadth and depth of educational background to support professional growth and continued career advancement. The result of this directed effort from an energized faculty and administration are motivated graduates who have the foundation to master the art and science of managing wild lands for the betterment of both the local and global communities.

If you would like to speak to someone about the programs in the school of Forestry and Wildlife Sciences, please call the Director of Student Services at (334) 844-1050, the Coordinator of Student Recruitment at (334) 844-1094 or send an email to workingwithnature@auburn.edu.

A Forest Engineering option is available under the Bachelor of Biosystems Engineering (BSEN) degree program. It is offered in conjunction with the Samuel Ginn College of Engineering.

Students in the SFWS with exceptional academic qualifications should also consider enrollment in the University’s Honors College. This opportunity is described under Special Academic Opportunities in the Academic Polices section of the Bulletin and carries a number of significant benefits to qualified students.

Accreditation

The bachelor’s programs in Forestry and the Forest Engineering option in Biosystems Engineering (the latter with addition of the Forest Resources minor) are accredited by the Society of American Foresters (SAF). SAF is the accrediting body recognized by the Council on Higher Education Accreditation as the accrediting agency for forestry education in the United States. Graduation from such SAF-accredited programs is required of all applicants for Registered Forester status in Alabama and several other states. The Biosystems Engineering program with the Forest Engineering option is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET). Completion of the Wildlife Ecology and Management degree program qualifies the graduates for certification as associate wildlife biologists by The Wildlife Society. Completion of the Wildlife Pre-Vet degree prepares students for continuing to a college of veterinary medicine or other health-oriented study.

Forest Engineering Option

The Department of Biosystems Engineering in conjunction with the Samuel Ginn College of Engineering and the School of Forestry and Wildlife Sciences offers an accredited degree in Biosystems Engineering with a Forest Engineering option. Graduates are qualified to pursue Professional Engineering (PE) credentials. To receive a Society of American Foresters accredited degree and be eligible
to become a registered forester in the state of Alabama, students must complete the forest track in Biosystems Engineering and the Forest Resources minor in the School of Forestry and Wildlife Sciences.

This program is committed to preparing students for productive professional careers in the forest products industry and related natural resource and environmental systems sectors. Specific educational objectives of the program are: 1) graduates solve engineering problems such as those associated with the environment and natural resources, and the production, processing, storage, manufacture, utilization, and recycling of biological products; 2) graduates develop solutions to problems that combine engineering and biological sciences; 3) graduates develop environmentally and economically feasible and practical design solutions; and 4) graduates expand the role of engineering in society, communicate effectively, practice in a professional and ethical manner, and provide leadership in the profession.

The curriculum is coordinated by the Samuel Ginn College of Engineering and the School of Forestry and Wildlife Sciences. Students register in the Samuel Ginn College of Engineering and are assigned academic advisors in Biosystems Engineering and in Forestry. Beginning students should apply to the Samuel Ginn College of Engineering and complete the Pre-Forestry Engineering, program. (See the Samuel Ginn College of Engineering, Department of Biosystems Engineering section for the curriculum model, and detailed admission and degree requirements.)

Military Science

In all curricula within the School of Forestry and Wildlife Sciences, electives may include any number of Basic ROTC or Advanced ROTC. In curricula which do not provide sufficient electives for this purpose, ROTC may be taken in lieu of required courses outside of the major and not in the university core, to be selected with the approval of a School advisor. Common courses selected are Natural Resource Electives in the Wildlife curriculum, and forestry restricted electives.

Curriculum in Forestry

The objectives of the forestry curriculum are to provide: 1) the fundamental knowledge regarding the resources that professional foresters typically manage and the multiple uses, sustaining, and conservation of those resources; 2) a general education integrating physical, social and biological sciences to prepare the forester for the role as steward of public and private forest resources; and 3) training and skills needed for initial forestry employment, as well as for advancement to higher levels of managerial responsibility. The forestry degree is appropriate for students who seek employment in any aspect of forest resource management, from forest industry lands where timber production is typically the primary objective, to private non-industrial properties where multiple use predominates, to public lands where recreation or environmental protection is often paramount. The curriculum emphasizes biological, ecological, environmental, social, economic, and ethical considerations in forest management.

The required courses in the professional forestry curriculum (FORB, see below) are designed to be taken in sequence and as a block. The work is integrated among courses in each semester and between semesters. Students must pay careful attention to the prerequisites of the junior and senior year courses, which are strictly enforced by the school, to ensure successful completion of the forestry program.

Geospatial and Environmental Informatics

The Bachelor of Science in Geospatial and Environmental Informatics (GSEI) provides students rigorous training in fundamental theories, concepts, quantitative tools, analytical technologies and research skills that are used to acquire spatially referenced information and analyze spatial processes. Geospatial technologies such as geographic information systems (GIS), the global positioning system (GPS), satellite-based remote sensing, and computer simulations have penetrated every aspect of our lives. As a result, professionals with skills in GSEI related areas will be in high demand for collecting, collating, modeling, analyzing, visualizing, and communicating geospatial information. They range from digital maps in vehicles to the management tools of natural landscapes and city infrastructure. The area of Geospatial and Environmental Informatics brings information technology, spatial science, data analysis, natural resources and ecological modeling together and enables us to apply them for sustainable management of natural resources. Students successfully completing this degree will: 1) Understand the various types of geospatial and environmental data and their spatial and temporal dynamics, 2) Learn various technologies involved in data collection, storage, and data distribution to the end users including data models and structures to store and organize geospatial and environmental information, and 3) Manipulate data into information for a given environmental problem or related issues for policy-making decisions.

**Curriculum in Natural Resources Management**

**Requirements**

Admission requirements for the Natural Resources Management Bachelor of Science Degree (NATR) are the same as those for entering Auburn University.

The Natural Resources Management degree program was approved in 2011 as a flexible major that includes core natural resource management courses plus a required minor, concentrating course work on one of many diverse outdoor careers. Examples of minors that can be embedded in the degree include Nature-Based Recreation, Watershed Sciences, Urban Environmental Science, Natural Resource Ecology, International Business, or Sustainability. The curriculum is designed to meet the needs of students and employers who are interested in the extensive variety of positions within the natural resources community outside of traditional careers within forestry and wildlife sciences. Employers and positions include, but are not restricted to, Park Service Manager, Ecotourism Entrepreneur, Reclamation and Development Manager, Wetlands Manager, or Sustainability Officer. The degree may also be followed by pursuit of additional degrees such as obtaining a law degree to practice law for non-governmental organizations or advanced degrees for teaching and/or research.

Students in Natural Resources Management must select a faculty advisor to help with the many choices within the major, including selection of the embedded minor. Any minor may be considered, but the student will need to be able to explain how the minor supports a particular field within natural resources management. Students must also demonstrate the existence of sufficient employment options with the chosen electives by identifying and contacting future employers. It is strongly recommended that any student who enrolls in Natural Resources Management be proactive in promoting themselves and the degree, as there is no single certifying body for the broad range of careers.

To remain enrolled in Natural Resources Management a student must make timely progress toward completion of the degree and maintain minimum GPA standards established by Auburn University.

Curriculum in Sustainable Biomaterials and Packaging

Successful graduates will gain an understanding of the chemical, physical, and mechanical properties of solid wood and bio-based products and packaging materials. Students within this degree program will be exposed to an overview of trade and marketing knowledge and the structure of both traditional forest products as well as emerging sustainable biomaterial industry segments, the trade patterns and marketing, the role of private industry and government organizations in development and trade of the segments, and the potential contribution of economic development. They will know the thermal, electric and acoustic properties of the bio-based products and packaging materials and understand the relationships between anatomical structure and physical/mechanical behavior of materials.

The Sustainable Biomaterials and Packaging degree is appropriate for students who seek employment in any aspect of forest product development that uses the sustainable fiber resources from the forest industry. The curriculum emphasizes biological, ecological, environmental, social, economic, and ethical considerations in sustainable biomaterials and packaging markets.

Environmental concerns and evolving technologies are moving companies toward the use of sustainable forest biomaterials for everything from packaging, cosmetics, and automobiles to appliances, pharmaceuticals, and commercial construction. These developments are increasing the demand for professionals with diverse expertise in biomass production and operational logistics; conversion processes of products and packaging; and product development, sustainability and business. It is anticipated that bio-based industries, which includes wood processing, construction, chemicals and energy, bio-plastics, and packaging will be the next area of significant economic growth. The Sustainable Biomaterials and Packaging degree program was developed to provide students with knowledge, hands-on experience, and skill sets to prepare them for in-demand careers.

Curriculum in Wildlife Ecology and Management

The Wildlife Ecology and Management (WLDE) degree program provides a broad biological education that is specifically designed to meet the needs of students interested in careers involving wildlife ecology, management, and conservation. Graduates are employed with state or federal wildlife agencies, environmental consulting firms, private conservation organizations, and private land management companies. Because many jobs require a master’s degree, the program is designed to prepare students for graduate studies in wildlife ecology and management.

Wildlife Enterprise Management

Students successfully completing the WLEM Curriculum will have an understanding of the principles of wildlife managements as they apply to consumptive enterprises and will appreciate the ecological principles that lie at the foundation of conservation biology and ecotourism. The objective of this degree program is to prepare students to manage a wildlife or outdoor enterprise, providing a set of baseline skills related to customer service, food and lodging, and legal issues to enable graduates to effectively operate, market, and advertise a wildlife or outdoor enterprise. In addition, students who follow the curriculum will qualify for a Business Minor offered by the Harbert College of Business.

### Wildlife Enterprise Management Restrictive Electives

The WLEM BS Degree program has considerable flexibility for students to focus their areas of interest. For this reason, students can select any four courses from the following Restrictive Electives. Students can therefore tailor their elective choices towards Biology, Forestry, Fisheries, or Wildlife.

### Curriculum in Wildlife Science Pre-Vet Concentration

Students may be admitted to the College of Veterinary Medicine (CVM) upon completion of the minimum requirements listed below. If students are admitted to the CVM prior to completion of the full four years, they may obtain a bachelor of science in this concentration after successful completion of the freshman year in the CVM. The minimum requirements for admission to the CVM are incorporated in the first three years in the Wildlife Sciences, Pre-Veterinary Medicine Concentration. All minimum requirements must be completed by

## Watershed Sciences Minor

Watershed science and management is an expanding field that involves managing the availability, quantity, and quality of water. Many major metropolitan areas and smaller cities rely on forested watersheds to purify the necessary drinking water for their populations. Many highly trained and dedicated professionals, knowledgeable in hydrology, climates, and water sciences, are needed in coming years to be certain this necessary commodity is provided to the United States and the world's growing populations.

The College of Human Sciences is a diverse, engaging learning environment where we produce tomorrow's leaders through education of the highest quality and a commitment to helping students make positive impacts on the world around us. We teach the art and science of design, food, nutrition, hospitality and relationships in a classroom that spans the globe. We discover sustainable solutions to everyday problems, ignite creativity across disciplines and support our students by building the confidence and skills they need to change the world.

Founded on a belief in science for a quality life, Human Sciences' programs enable students to positively impact the health and well-being of individuals, families, and consumers. Beyond technical preparation, our graduates possess a broad worldview, a diverse understanding of the world in which they live and work, and a commitment to building a better world - one life at a time.

The College of Human Sciences includes the departments of Consumer and Design Sciences; Human Development and Family Studies; and Nutrition, Dietetics, and Hospitality Management. Programs of study leading to the bachelor of science degree can be planned within seven curricula in the College of Human Sciences. These curricula are designed with flexibility to meet the needs of students with a variety of academic interests and goals. Program-specific accreditations/approvals/endorsements/certifications have been attained for several programs.

Transfer Requirements
To transfer into the College of Human Sciences, a student must be eligible to take classes and pursue an Auburn degree. However, students need to be aware of GPA restrictions and other progression requirements as well as admission requirements for individual degree programs.

Graduation Requirements
To earn the bachelor's degree from the College of Human Sciences, students must complete the hours and subject matter requirements of their curricula and must have a minimum grade-point average of 2.0 on all course work attempted at Auburn University, and in addition, a 2.0 cumulative grade-point average on all work attempted in the major.

Consumer and Design Sciences

The Department of Consumer and Design Sciences focuses on consumers’ interactions with their immediate and near environment. Three majors are offered: 1) Apparel Merchandising, Design and Production Management, 2) Interior Design, and 3) Philanthropy and Nonprofit Studies. These curricula focus on principles of consumer behavior and design, management, product development and marketing science, technology, and philanthropies and nonprofits. Majors in these curricula may lead to careers in business, design practices, and nonprofits that apply knowledge to developing, evaluating and offering consumer goods and services, interpreting consumers’ wants and needs, informing and advising consumers and designing environmental spaces. A senior-level internship is required in all curricula. Accelerated BS/MS programs are available in AMDP and INDS. Please contact department for additional information.

Apparel Merchandising, Design and Production Management

Apparel Merchandising, Design and Production Management is a professional curriculum with two options: 1) Apparel Merchandising (APME) and 2) Product Design and Production Management (APDP). Diversity within the major allows students to select such varied fields as apparel design, apparel production management, retail sales and/or management, apparel merchandising, retail buying, fashion journalism, and consumer-producer relations. A professionally supervised internship is required. The program is endorsed by the American Apparel and Footwear Association.

Academic Standards and Policies: Students in both AMDP options must earn a grade of a C or higher in all prerequisite courses in the major, and have a cumulative GPA of 2.0, before being allowed to proceed to the next course in the sequence. Major courses include the Human Sciences college core courses and all required Consumer and Design Sciences courses that are indicated in bold print in the models. Students must earn a grade of C or higher on all required courses in the major to complete graduation requirements.

Interior Design

Interior Design (INDS) is a four-year bachelor of science program accredited by the Council for Interior Design Accreditation (CIDA). The curriculum focuses on the design of the near environment, the aesthetic and functional aspects of space planning, furnishings and materials, lighting and mechanical equipment, and the integration of these aspects of the built environment to fit the needs of the user. A professionally supervised internship is required. Student work from courses in the major may be retained by the program for accreditation and exhibit purposes.

Academic Standards and Policies: Freshman and transfer students admitted to Auburn University, as well as internal transfer students from within Auburn University, who desire to major in Interior Design, College of Human Sciences, will be admitted to Pre-Interior Design (INDX). The Pre-Interior Design students must complete the first year of Pre-Interior Design course work, i.e., CADS 1000 and CADS 1100 with a grade of “C” or better in order to be evaluated for possible admission into the Interior Design curriculum. Admission into the Interior Design program (sophomore-senior levels) is limited with a maximum class size of 40 students per year. Admission will be based upon a portfolio review by the Interior Design faculty of the work completed in the Pre-Interior Design course work. Course work in the major must be taken in sequence; transfer students should anticipate that additional semesters of study may be required.
to complete the program. Students in INDS must earn a grade of a C or higher in all prerequisite courses in the major before being allowed to proceed to the next course in the sequence. Major courses include the Human Sciences College core courses and all required Consumer and Design Sciences courses that are indicated in bold print in the model.

**Philanthropy and Nonprofit Studies**

The B. S. in Philanthropy and Nonprofit Studies will address the growing need to educate the next generation of philanthropic and nonprofit leaders. The nonprofit sector is steadily expanding. There is an increasing need for highly prepared professionals to lead nonprofits and promote philanthropic goals. As government programs and funding evolve in scope and size, there is a heightening demand for efficient and effective nonprofit organizations to enable and promote an expanding range of philanthropic activities that benefit local, regional, national, and international populations. Our society increasingly depends on nonprofits because the impacts of philanthropic acts address crucial societal needs.

Both individuals' and families' full implementation of philanthropic goals is enabled through financial planning. A significant component of the Philanthropy and Nonprofit Studies major is the incorporation of personal financial planning that builds philanthropic goals into the plan. This component contributes to individuals' quality of life and to potential careers advising individuals in their planning or directly raising funds for nonprofits. Through the B.S. in PNPS, students will blend coursework with experiential learning through a practicum and internship. Additionally, students' awareness of and involvement in philanthropy will be built through guest lectures from nonprofit organizations.

**Consumer and Design Sciences, ABM**

**Apparel Merchandising, Design and Production Management (AMDP)**

The accelerated BS/MS in Apparel Merchandising, Design and Production Management (AMDP) degree program will provide an opportunity for highly motivated and academically strong students to gain a depth of understanding of apparel merchandising, design, and product development beyond that of typical bachelor's level graduates. It should make them more competitive in the job market or for additional graduate studies. The program will allow students to achieve a graduate degree in an accelerated period of time.

Students with at least 45 credit hours but no more than 96 and a 3.0 GPA will be eligible to apply for the program. Applications for the accelerated BS/MS in AMDP will consist of plans of study for both the Bachelor of Science in AMDP and the Master of Science in Consumer and Design Sciences. Applications will be due October 1 in the Fall of the Junior Year. Upon approval by the Undergraduate Program Coordinator, the Graduate Program Officer and the Department Chair, students will be admitted to the accelerated program and may register in the 6000-level courses at the appropriate time in their plan of study.

Students will matriculate in the accelerated program at an appropriate time as designated by the plan of study. This would begin in the spring of the junior year of their undergraduate program and continue until the last semester in the normal bachelor's degree program at which time the B.S. degree will be awarded. The Master of Science in Consumer and Design Sciences would be completed in May of
the second year in the advanced degree program. On completion of the BS degree, students must apply to the Graduate School and be accepted into the MS program in the Department of Consumer and Design Sciences.

All undergraduate students enrolled in the program will be required to meet with the undergraduate program coordinator each semester before registering. Graduate students will have a major professor directing their thesis research. The Graduate Program Officer is available as needed.

Withdrawal Process: Student may withdraw voluntarily from the Accelerated program by notifying the Graduate Program Officer.

Human Development and Family Studies

The Human Development and Family Studies (HDFS) undergraduate curriculum is designed to prepare students for a variety of careers that contribute to the well-being of individuals and families across the life span. Career directions include, but are not limited to, teaching preschool-aged children, supporting children and families in a hospital setting, serving teens in residential treatment or church programs, aiding adult and/or elderly populations, implementing family education in the broader community, or advocating for family policy within government settings. Students also gain excellent preparation for graduate school. Majors select one of five concentration areas: Early Child Development, Child Life, Middle Childhood/Adolescence, Adult Development, or Family Life Education. The capstone course for students is the full-time undergraduate internship where classroom learning and real life come together to strengthen professional competence. The HDFS curriculum draws from the knowledge of many academic disciplines to promote understanding of current issues for individuals and families in modern society, and it is approved by the National Council on Family Relations to offer the Provisional Certified Family Life Education (CFLE) designation. The Department also operates the Auburn University Early Learning Center as well as the Harris Early Learning Center in Birmingham, Alabama. Both programs are accredited by the National Association for the Education of Young Children.

Fingerprint/Criminal Background Checks are required of all HDFS majors. Students who do not obtain the required background check and clearing letter will not be allowed to enroll in practicum, service learning, research, or internship courses.

Academic Standards and Policies: Students must earn a grade of C or better on all required HDFS major core classes at the 3000-level or higher to complete graduation requirements.

1. Must choose from PHIL 1010, PHIL 1020, PHIL 1030, PHIL 1040, PHIL 1080, PHIL 1090, PHIL 1100, PHIL 1110. Child Life must choose PHIL 1030.

### Nutrition, Dietetics, and Hospitality Management

The Department offers two majors: Hospitality Management (HOSP) and Nutrition (NTRI). The HOSP major emphasizes food, lodging and event services for consumers in the tourism and hospitality industry. The HOSP major offers three study options: Hotel and Restaurant Management (HRMG), Event Management (EVMT) and Culinary Science (CULI). The NTRI major offers three study options: Nutrition/Dietetics (NTDI), Nutrition Science (NSPM) and Nutrition/Wellness (NTWE).

### Hospitality Management

The Hospitality Management Major prepares students for careers in hotels, resorts, culinary, restaurants, the event sector and other positions in the tourism and hospitality industry. With its focus on instructional research and outreach initiatives, the Hospitality Management program’s mission is to educate exceptional leaders for the State of Alabama and the global hospitality and tourism industry. Faculty concentrate on service excellence, social and ethical responsibility, diversity and inclusion in a practically oriented and intellectually stimulating learning environment.

The major offers students three exciting study options to choose from, including (1) Hotel and Restaurant Management, (2) Event Management and (3) Culinary Science.

Academic standards and policies: Students must earn a “C” in all required courses in the Hospitality Management Major. Students must earn a “C” or higher in all pre-requisite HOSP courses in the major.

### Hotel and Restaurant Management Option

The Hotel and Restaurant Management (HRMG) option is designed to prepare graduates for careers in the premium service segment of the hospitality industry. This focus makes the Auburn HRMG program nationally unique. The HRMG curriculum provides career preparation for hotel management and food and beverage (restaurant) management, including private club management.

### Event Management Option

The Event Management option is designed to service the educational needs of those students seeking to advance their careers in the event management field. As is the case both nationally and globally, this sector now makes a significant contribution to the socio-economic wellbeing of the state of Alabama and the nation. The event management curriculum focuses on the planning, execution and evaluation of a myriad of special events including, family, social, sporting, historical, musical and food and beverage oriented.

### Culinary Science Option

The Culinary Science option is designed to service the needs of students seeking to advance their careers in the broad culinary field, including the commercial and non-commercial food production and service industry. The program will prepare students for advanced career entry by providing them with a differential mix of hands-on experience and the professional skill set deemed critical for success.
in this ever evolving and innovative sector. The program blends the art, science, and business of food to prepare students for a wide array of employment opportunities.

**Nutrition**

The field of nutrition is concerned with human physiology and biochemistry and their relationship to human health, diet, and well-being. The NTRI curriculum has three options which permit specialization according to students’ specific interests.

Course work in the major must be taken in sequence. On and off campus transfer students should anticipate that additional semesters of study may be required to complete the program.

**Nutrition Science Option**

The Nutrition Science option prepares students for a variety of health professional schools, such as medical, dental, pharmacy, optometry, physical therapy, and physician’s assistant, as well as for graduate study in the nutrition discipline. The pre-pharmacy program in particular permits students to take only three years of undergraduate classes before starting the Pharm.D. program at the Harrison School of Pharmacy. During their junior year, students will begin the application process for pharmacy school. After successful completion of four semesters in the Harrison School of Pharmacy’s Pharm.D. program, the College of Human Sciences will approve conferral of a student’s Bachelor of Science in Nutrition/Nutrition Science.

**Nutrition/Dietetics Option**

The Nutrition/Dietetics option is designed to prepare students interested in completing the requirements to become credentialed as a Registered Dietitian (RD) and Registered Dietitian Nutritionist (RDN). This option prepares students for careers in clinical nutrition, community nutrition, public health, nutrition education and counseling, foodservice management, and food and nutrition in industry.

Graduates who successfully complete the Didactic Program in Dietetics are qualified to apply for a post-baccalaureate supervised-practice program, which is a requirement for eligibility to take the National Registration Examination for Dietitians and earn the RD/ RDN credential. The Auburn University’s Didactic Program in Dietetics is accredited by the Accreditation Council for Education in Nutrition and Dietetics of the Academy of Nutrition and Dietetics, 120 South Riverside Plaza, Suite 2000, Chicago, IL 60606-6995, (312) 899-0040 ext. 5400. Http://www.eatright.org/ACEND.

Academic Standards and Policies: Freshmen and on and off campus transfer students who desire to major in Nutrition/Dietetics will be admitted to Pre-dietetics (NTDX). To be eligible for consideration for admission to the didactic program in dietetics, applicants must successfully complete at least 45 semester hours of the pre-dietetics curriculum courses, including:

- as well as 4 of the following 6 science courses:
  - CHEM 1030/1031 Fundamentals of Chemistry I
  - CHEM 1040/1041 Fundamentals of Chemistry II
  - CHEM 2030 Survey of Organic Chemistry
  - BIOL 1020/1021 Principles of Biology
  - BIOL 2500/2501 Anatomy and Physiology I
  - BIOL 2510/2511 Anatomy and Physiology II

Students must successfully complete the lower-division pre-dietetics prerequisite courses as outlined below with a minimum GPA of 2.8 on a 4.0 scale. No grade lower than a “C” will be accepted in any prerequisite course (BIOL 1020/1021, BIOL 2500, BIOL 2510, CADS 2000, CHEM 1030/1031, CHEM 1040/1041, CHEM 2030, HDFS 2000, NTRI 2000 (2003 or 2007), NTRI 2070, PSYC 2010.)

Criteria for admission include pre-dietetics cumulative GPA, science GPA, and student’s personal statements and career goals. Due to the limited number of seats, achievement of minimum standards does not ensure admission into the Didactic Program in Dietetics.

Program Application: Pre-dietetic students must formally apply to the DPD, upon completion of the admission requirement course work. Once grades are posted for the semester, students will complete the application located on the Nutrition Dietetics website and follow application instructions to submit.
Nutrition/Wellness Option

The Nutrition/Wellness option prepares students for careers in health-related settings. Graduates find positions in non-profit health organizations, hospital-based and corporate-based programs, and federal, state and local health agencies.

Global Studies in Human Sciences

For Global Studies in Human Sciences students, the world is their classroom. Global Studies focuses on topics such as hunger and food insecurity, community development and entrepreneurship, environmental sustainability, maternal and child health, education, global markets, humanitarian aid and social policy. Key to gaining real-world experience with these and other issues, and fully understanding the diverse nature of other cultures, a minimum of one study abroad experience and a semester-long internship is required for every student enrolled in the program. In addition to the valuable lessons learned abroad and in the internship, the Global Studies curriculum teaches students to use design-thinking methodologies to develop solutions to global issues. Through this course of study, students learn the realities of globalization and how local and global issues are interconnected and develop a refined skill set that will equip them to work collaboratively with communities and organizations to improve quality of life around the world.

Global Studies graduates are prepared to step into roles in large national and multinational companies, philanthropic foundations, global and local nonprofits, as well as governmental and non-governmental organizations or pursue graduate study in fields ranging from law to public health and social entrepreneurship among others. The Global Studies interdisciplinary degree, coupled with the required minor, study abroad and internship, actively prepares students to become global citizens and empowers them to pursue their passions.

**Health Equity Science - Undergraduate Certificate**

The undergraduate Certificate in Health Equity Science (CHES) is administered through the Department of Human Development and Family Studies in the College of Human Sciences. Students completing this certificate program will have a strong understanding of the
role of social context in generating disease risks and disparities in health between groups. Students will also learn how this corpus of
knowledge can be translated into health-promoting policies and community-level interventions.

The CHES requires 12 semester hours (at least fifty percent of which must be at the 3000-level or higher), and completion of this
certificate will appear on the official Auburn University transcript. Students earn the certificate by completing:

1 Elective courses relevant to the certificate vary from year to year. Courses with substantial content focused on health equity science or social inequality are likely to qualify. Please email course syllabus to Dr. Thomas Fuller-Rowell (tfr1@auburn.edu) to obtain approval. The following elective courses have recently been approved: SOCY 2000 - Social Issues; HDFS 5300 - HDFS and Social Policy; RSOC 5510 - Social Welfare, Families, & Poverty.

2 Thesis, practicum, and internship activities are not required for the certificate but are an alternative way to complete the elective credit requirements. In departments where such opportunities are available, these opportunities would be organized by the student within their department or with a faculty mentor. To obtain approval for credits to count towards the certificate, students should submit a 1 page description of the internship or practicum time commitment and primary activities, signed by the student and her/his supervisor, and a 1 page description of how the activities are relevant to health equity science topics. Students completing thesis credits to meet the certificate requirements should submit their thesis proposal for preliminary approval, and the completed thesis for final approval (tfr1@auburn.edu). General questions about how to obtain the certificate should be directed to Adam Greer, HDFS Career Services Specialist (adamgreer@auburn.edu).

No more than 6 hours may be lower division (2000 and below) classes. Courses taken as a requirement for the major or University core cannot be counted toward the minor. No S/U courses can be counted toward the minor. Students must earn an overall grade average of "C" (2.0) on all courses taken in the minor.

College of Liberal Arts

JOSEPH AISTRUP, Dean
CYNTHIA BOWLING, Associate Dean for Research and Faculty Development and Graduate Studies
CHARLES A. ISRAEL, Associate Dean for Academic Affairs
GIOVANNA SUMMERFIELD, Associate Dean for Educational Affairs

Majors in Liberal Arts prepare students for immediate employment after receiving undergraduate degrees, for example, as journalists, public relations experts, archivists, interpreter/translators, curators, social scientists, counselors, fine arts and entertainment industry professionals, education support specialists, management professionals, or technical communicators. Students also receive strong academic backgrounds for graduate study or professional education. The College of Liberal Arts consists of five academic areas, each of which is divided further into departments:

- Humanities: English, Foreign Languages and Literatures, History, and Philosophy, awarding Bachelor of Arts degrees.
- Fine Arts: Art, Music, and Theatre, awarding Bachelor of Arts, Bachelor of Music, and Bachelor of Fine Arts degrees.
- Communication: Communication Disorders and Communication and Journalism, awarding Bachelor of Arts and Bachelor of Science degrees.
- Behavioral and Social Sciences: Aviation, Economics, Political Science, Psychology, and Sociology, Anthropology, and Social Work, awarding Bachelor of Arts and Bachelor of Science degrees.
- University College: Interdisciplinary University Studies and Interdisciplinary Minors.

Becoming a Liberal Arts Major

Entering a Major: Incoming freshmen and external transfer students are admitted directly to the College of Liberal Arts. The following majors have additional admission requirements beyond university admission: Art-BFA, Aviation-Professional Flight, Communication, Communication Disorders, Health Services Administration, Interdisciplinary University Studies, Journalism, Music, Public Relations, Media Studies, Social Work, Theatre-BFA. Students should contact the department that houses their intended major to determine specific entrance requirements.

Declaring a Major: All students must declare a major by the end of the semester in which they complete 65 semester hours of credit, including transfer and other college credit. Students transferring into the College of Liberal Arts with 65 or more semester hours of credit must declare a major upon admission. If a major is not declared at the time of admission, students will follow the requirements for the College of Liberal Arts and will be identified as pre-majors in a curriculum or by the designation UNLA for undeclared students.

Required Courses for All Liberal Arts Majors

Most majors in the College of Liberal Arts require students to complete a one-year sequence in a foreign language. Students are placed into each sequence based on results of a placement exam administered by the Department of Foreign Languages and Literatures prior to their enrollment at Auburn. Students in Aviation, Interdisciplinary Studies, and those pursuing BFA degrees in Art and Theatre are exempted from the foreign language sequence requirement. Most majors in the College of Liberal Arts also require students to complete LBAR 2010: Liberal Arts Careers Preparation; majors not requiring that class have identified other specific places in their curricula addressing career preparation for students.

Policies for Concurrent Degrees and Double Majors

To earn a second baccalaureate degree, students must complete a separate body of knowledge appropriate for the degree. The Dean’s Office in the College of Liberal Arts determines when it is possible for students to earn a second baccalaureate degree. Auburn University academic policy stipulates the minimum hours necessary in addition to the primary degree or curriculum. The College of Liberal Arts requires that, at a minimum, 30 additional hours of non-overlapping course work must be accomplished in the second baccalaureate degree program.

To earn a double major, students must complete all the major courses in both majors. Of these major courses, at least 20 hours of each major must be unique, rather than being used as major, support, or core courses in both majors. If at least 20 hours of unique courses do not exist for each of the two majors, students cannot pursue a double major.

For complete information on concurrent degrees and double major requirements, please see the Academic Policies section.
Special Academic Opportunities

To augment the learning experiences available through majors in the College of Liberal Arts, students can take advantage of the following possibilities:

• **Concurrent Degrees with the College of Engineering.** Students can receive a degree from a Liberal Arts major and a degree from a major in the Samuel Ginn College of Engineering, including specially designed programs pairing engineering and modern language training. To ensure that all requirements are met, students should see advisors in both colleges. Typically, five to six academic years are necessary to complete concurrent degrees.

• **Pre-Law Study.** While students interested in advanced study of the law should consider the Law and Justice major, most majors in Liberal Arts are accepted by law schools as appropriate preparation for the study of law. However, students should consult with the pre-law advisor in Haley Center 7002 in preparing for law school admission and the study of law. The pre-law advisor will suggest the most useful courses to take.

• **Pre-Health Study.** Most majors in Liberal Arts are accepted as preparation for professional degrees in health, including medicine, dentistry, optometry, physical therapy, and occupational therapy. Generally, students will need to take particular courses in science, mathematics, and philosophy as their university core requirements. They will also need to take additional courses in science and mathematics not required by most Liberal Arts majors and attend a Pre-Health Professional Orientation course offered during fall semester. To ensure they complete the necessary requirements and to get assistance in applying to graduate or professional programs in health fields, students should meet with the pre-health advisors in the College of Science and Mathematics. Students should also consult with advisors in the College of Liberal Arts and in the departments that house their majors.

• **Teacher Certification through the College of Education.** Students holding baccalaureate degrees in English, history, French, or Spanish may gain teaching certification through enrolling in the Alternative Master’s Certification Program in the College of Education. Upon successful completion of the program, students are awarded a master’s degree in education (MEd), and they will be eligible to apply for Alabama Class A certification (master’s level certificate).

• **University Honors College.** Students with extraordinarily high academic aptitude can receive individual learning opportunities through the Honors College. For more information, see the “Academics Policies” section.

• **Study Abroad.** Students can gain course credit either through class instruction or internship in Study Abroad programs. For more information, students can contact the Office of International Programs or the departments or colleges that house these Study Abroad opportunities.

• **Cooperative Education Programs.** Students receive opportunities to integrate classroom education with work experience in Cooperative Education Programs. Students alternate each semester between attending classes and working for companies. Cooperative Education Programs are available in the Departments of Art, English (Professional Writing and Public Writing track), Political Science (Health Services Administration and Public Administration majors), Psychology, and Sociology, Anthropology, and Social Work. Interested students should contact the director of the Cooperative Education Program.

• **The Caroline Marshall Draughon Center for the Arts and Humanities.** Students may be interested in the programs and other activities sponsored through the Caroline Marshall Draughon Center for the Arts and Humanities at Pebble Hill. As described on its website, the mission of the Center is “to strengthen the bonds between the College of Liberal Arts and the public by creating and implementing arts and humanities programs that explore our individual and collective experiences, values, and identities through the past, in the present, and for the future. The Center also creates occasions and space for dialogue, intellectual community, and cross-disciplinary scholarship.”

Art and Art History

The Department of Art & Art History offers a relevant, rigorous, and purpose-driven education in studio art and art history, and presents engaging programs and exhibitions that both stimulate an understanding of diverse forms of artistic expression and encourage cultural and intellectual awareness. The Department provides a challenging and supportive atmosphere in which majors learn to conduct insightful and high-impact scholarship and creative research, and through outreach and professional experience become competitive in diverse career paths. The Department of Art and Art History offers three majors: a Bachelor of Arts (formal option in Art History), a Bachelor of Arts in Studio Art, and a Bachelor of Fine Arts in Studio Arts.

The BA in Art (formal option in Art History) offers students training in the global history of art, from the ancient period to the present, through a range of interpretive methods. Bolstered by internship opportunities and study abroad experiences, the curriculum requires a breadth of study across Ancient and Medieval, Renaissance and Baroque, Modern and Contemporary, and Non-Western art. The degree prepares students for careers in museums, galleries, auction houses and other cultural institutions, as well as education, business, and law, and provides a foundation for graduate studies in the field.

The BA in Studio Art is ideal for students who are passionate about art making and who wish to take a breadth of courses across media, including ceramics, drawing and painting, photography, printmaking and sculpture. The flexibility of the BA degree curriculum enables students to take advantage of additional academic courses of study across the University and to combine the study of studio art with a major or minor in another field of study.

The BFA in Studio Art is a professionally-oriented program that prepares students for graduate school and careers in the arts. BFA students concentrate in one of five areas: painting/drawing, sculpture, ceramics, photography, or printmaking. Students may complement their focus with additional studio courses in digital arts or study abroad. BFA students must complete an advisory review during their sophomore year. The following are required for the review:

- Completion of 23 credit hours of studio art and art history courses (check with the department for a list of courses).
- Submission of a BFA review application form.
- Submission of a written statement of academic and career goals.
- Submission and presentation of a portfolio of artwork.
- Completion of an in-person review with a committee of designated Department of Art & Art History faculty.

The Studio Art Minor is designed for students who want to enrich their major field of study with a competency in art making. A minor in studio art is valuable for any student seeking to develop innovative thinking and creative expression through a range of drawing, design, painting, photography, sculpture, printmaking, and ceramics courses. Students pursuing fields as varied as engineering, communications, and marketing can benefit from instruction in creative thinking practices, and in critical and observational skills. Art coursework can better prepare students for advanced study in allied fields such as architecture, graphic design, environmental design, interior design, and industrial design. The range of art experiences offered in the studio minor fosters a lifelong appreciation and enjoyment of art.
The Art History Minor is ideal for students who wish to supplement their majors with the visually and intellectually stimulating study of art and visual culture. Minors develop numerous transferable skills including writing, research, critical thinking, visual analysis, and oral presentation. These skills are invaluable in professions as diverse as law, medicine, business, communication, and education, as well as design, cultural preservation, and museum and gallery work.

**Curriculum in Professional Flight**

Auburn University is a FAA-approved Part 141 pilot school. Flight operations are conducted at the Auburn University Regional Airport (KAUO), located less than three miles from campus.

The Professional Flight degree qualifies the graduate for the eventual attainment of the FAA Restricted Airline Transport Pilot (R-ATP) certification with as little as 1,000 hours of flying experience. Degree certifications and ratings include Private Pilot Certification, Instrument-Airplane Rating, Commercial Pilot Certification, Multi-Engine Rating, Certificated Flight Instructor with Airplane Single-Engine rating (CFI), CFI with Instrument-Airplane rating (CFII), and CFI with Multi-Engine rating (MEI). One advanced pilot or flight instructor certification/rating MUST be completed at Auburn. To be eligible for the FAA R-ATP, the ground and flight training for the Instrument-Airplane rating and Commercial Pilot certification must be completed at Auburn.

Admissions, Standards, and Requirements

Eligibility for admission to the Professional Flight program is determined by the Auburn University Admissions Office on the basis of the candidate’s test scores and previous academic record.

Transfer Students

Transfer students (external and internal) may enter the Professional Flight program during Fall or Spring semester and will be accepted on a space-available basis as determined by the department chair. A minimum cumulative unadjusted grade point average of 2.70 is required. Students must meet with the Professional Flight advisor prior to transferring.

Progression

Students must earn a grade of at least C in all courses in the major and maintain a minimum 2.70 overall unadjusted GPA. The Professional Flight curriculum is designed for progressive development of flight knowledge and skills, and students who earn less than a C will not be allowed to progress to the next course. A course in which a student earns a grade less than a C may be repeated one time only. Successful completion of the repeated course will result in the student being allowed to continue to progress through the Professional Flight degree curriculum. Students who earn a grade less than C in two or more Professional Flight major courses, or maintain an overall unadjusted GPA below 2.70, will be considered for dismissal from the program.

Flight Fees

Flight lab courses have an associated flight fee established by the Department of Aviation prior to the start of the academic year. Flight fees cover aircraft, flight simulation, flight instructor, and FAA knowledge exam fees. The training hours and fees outlined below are an estimate for completion of a flight lab course, based on the FAA-approved training course outline (TCO). Students requiring additional instruction will incur additional flight lab fees. Unexpected large changes in fuel prices may necessitate the addition of a fuel surcharge for all training airplane usage.

Flight Lab Enrollment

Students cannot enroll themselves in flight lab courses. Additionally, students cannot enroll in the next flight lab course until successful completion of the previous course. If a student completes a flight lab during a semester, he or she cannot begin the next flight lab during the same semester. The student must wait until the next semester to begin and participate in the next flight lab.

Flight Lab Course Schedule Adjustment

Flight education is unique and student progression throughout the program is subject to uncontrollable factors such as weather. Auburn University’s Schedule Adjustment Policy allows departments to add students to courses through the first 15 class days of the semester. Additionally, with the approval of the Aviation Academic Advisor, the Chief Flight Instructor, and the Associate Dean, students may add classes after the 15th class day but prior to the Last Day to Withdraw date as published in the Auburn University Academic Calendar.

Flight Lab Course Incompletes

Students unable to complete a flight lab course within the term will be assigned a grade of Not Reported (NR). Final grades, once outstanding work is completed, will be assigned in accordance with Auburn University’s Grade Policy.

VA Students in Aviation

The Alabama State Approving Agency (SAA) and the Department of Veterans Affairs (VA) has approved federal funding for Auburn University’s Professional Flight and Aviation Management degree-programs. Under Chapter 33: Post 9/11 GI Bill®, the VA will cover the costs affiliated with Flight Instruction and required Ground School fees. Flight Instruction fees include aircraft, flight simulation, flight instructor, and FAA knowledge exams. Please note that the VA will ONLY cover the amount published in the Auburn University Bulletin and will NOT pay for any overage amounts/fees such as additional training like proficiency or review flights. Note that if the student accrues any additional fees past the amount approved by the SAA, the financial responsibility is on the student.

Students utilizing Federal VA Education benefits must ensure that they are registered for a flight lab prior to flying the course. Degree-applicable courses will be certified to the VA by the university’s School Certifying Official (SCO).

Additional information regarding VA benefits is available in the Auburn University Veterans Resource Center. Please contact them at (334) 844-8167, veterans@auburn.edu or online at veterans.auburn.edu.

Communication Disorders

The undergraduate major in Speech, Language, and Hearing Sciences is a pre-professional health care degree that prepares students to enter graduate programs in the communication disorders of either speech-language pathology or audiology. To become nationally certified speech-language pathologists or audiologists, students must earn a graduate degree. The Bachelor of Science undergraduate degree also can be used for employment as a speech-language pathology aide in the public schools of some but not all states. The BS degree, however, is intended for students who are capable of and committed to enrollment in an accredited graduate program in the field.

Students must comply with these requirements to be admitted to the major:

- Students must apply for admission to the major. Applications for admission must be received by January 31 in order for them to begin the major during the following summer term. Applications must be received by May 31 in order for students to begin the major during the following fall semester. Applications may be submitted any time prior to the deadline. Students may get information about the applications process online at the departmental website www.cla.auburn.edu/communicationdisorders/. The top 30-35 applicants are accepted in each of two admission cycles during the year. In order to apply, the student must have completed 30 hours of course work in the university core and must have a minimum of a B average in English Composition I and II.

The following information must be submitted to complete the application process online:

- Official transcripts must be sent to the Department of Speech, Language, and Hearing Sciences
- 300-word letter of intent
- A resume that covers activities from high school to present
- A video or in person interview as directed in the application
- Online application

Once admitted to the BS Speech, Language, and Hearing Sciences, students have to meet these requirements in order to graduate:

- Students must earn a C or higher in each major course. Any courses where students do not receive a C or higher must be repeated. Under these circumstances, graduation may be delayed.
- Students must have a 3.0 GPA to enroll in CMDS 4910 Clinical Practicum.

Economics

Majors from the Department of Economics pursue careers in business, banking and finance, government, and consulting. They are also prepared to enter graduate or professional programs in economics, law, business, or public policy. The department offers a Bachelor of Science in Economics with a primary and a quantitative track. The primary track requires students to complete a minor outside of the Department of Economics. The quantitative track is intended for students with a strong interest in pursuing graduate education in economics, and it requires additional mathematics and statistics courses. Students should check with a departmental adviser for requirements in the quantitative track.

Students must maintain at least a 2.0 GPA in major courses to graduate.

International Studies in Liberal Arts

International Studies in Liberal Arts is directed toward students interested in the broad study of social, political, cultural and economic global issues, and who want to develop language skills, expertise in a regional area, and personal experience in other cultures.

As global issues become more important for undergraduates to grasp as they prepare to embark on careers in an increasingly interconnected world, the International Studies in Liberal Arts degree will afford undergraduate students the opportunity for intensive study in the language, cultures, and ideas of a region or group of nations with an interdisciplinary approach. Housed in the Department of Foreign Languages and Literatures but with the support of departments in the humanities, fine arts, and social sciences, the International Studies in Liberal Arts program is an interdisciplinary major in the College of Liberal Arts. It offers thus a broad, interdisciplinary approach to international issues, as well as the opportunity to select a regional focus. Students may choose to focus in a particular region of the world, such as Europe, Africa, Latin America, Asia and the Middle East. All INTL students are expected to complete at least four semesters of foreign language. They are also expected to experience a total cultural immersion in a study abroad program in the region of their choice, either studying alongside local faculty and students and/or working in the local community. Students will also take courses that introduce them to the cultures, history, and achievements of the region in which they wish to concentrate. At the end of the program, students will also complete a capstone project, working with CLA faculty members in different departments to ensure a broad-based experience in writing and researching methodologies in line with their regional focus. With a thorough knowledge of a foreign language, broad background in cultural studies, and a deep immersion experience through a study abroad or international internship, the International Studies graduate will be a highly marketable potential employee and a well-informed citizen of the world.

Students with the International Studies in Liberal Arts B.A. degree are well prepared to work in education, tourism, translation, federal and state government, research and policy think tanks, non-profit and foreign aid organizations, law, the cooperative job sector, international banking and business, and military service.

The College also offers an array of study abroad, exchange, and international internship programs as well as minors and certificates in relevant topics. Check the bulletin or with CLA advisors for more information about these options.

**History**

The curriculum in History at Auburn endeavors to teach students both knowledge of the past and skills in the research and communication of that knowledge. As such, the Bachelor of Arts in History can serve as a sound foundation for graduates to pursue a number of career options. Auburn graduates in History have gone on to a diverse range of careers that include public history and archives, historic preservation, secondary education, public administration, law, military service, politics, and a range of business careers. While some students go on to teach history in schools and a small number pursue graduate education in history, most graduates are spread through career paths representing the broad possibilities that come with a well-developed ability to ask clear questions, research the information and sources necessary to construct an answer, write factually and persuasively, and think historically.

Students should check with their academic advisor to declare a History major.

To graduate with the BA in History, students must meet these requirements:

- All History majors should take HIST 3800 Historian’s Craft as early as possible in their academic program after completing core history. Students must complete the course before enrolling in History courses above the 3000 level.
- Students must earn a grade of C or higher in HIST 3800 before taking HIST 4950 Senior Thesis.
- All students must complete a course at the 2000 level or above that is focused on a non-European, non-American topic.
- To graduate, students must earn a minimum 2.0 GPA overall and in the History major.

Music

The Department of Music offers the Bachelor of Arts and Bachelor of Music degrees. Considered a professional degree by the National Association of Schools of Music, the Bachelor of Music degree prepares students for graduate study in music performance, for professional careers as performers, and for careers as applied music teachers. Other potential jobs can be found in churches, commercial music business, arts administration, and some private schools.

The Department of Music works in cooperation with the College of Education to provide course offerings for music education degrees. Students in music education must audition for placement in the required applied lessons.

The Department of Music provides qualified and interested students, regardless of their major, with a variety of music experiences. Performance groups, such as the Marching Band, Symphonic Band, Concert Band, Campus Band, Orchestra, Jazz Band, Percussion Ensemble, Chamber Choir, Concert Choir, Men’s Chorus, Women’s Chorus, University Singers, Gospel Choir, and various smaller music ensembles are available to all students. Many performance groups require a successful audition before admission.

Students must comply with these requirements to be admitted to the BA or BM in Music:

- Students must apply for admission.
- They must successfully complete an instrumental or vocal audition. Information about the audition is available from the departmental office.
Once they are admitted to a degree program in music, students have to meet these requirements in order to graduate:

• Students must earn a grade of C or higher in all music courses in order for those courses to count toward degree requirements.
• Students taking private instruction (MUAP) must successfully complete auditions before enrollment and must concurrently enroll in MUSI 1000 Performance Attendance. Information is available from the departmental office.

In all Fine Arts curricula, electives may include six hours Basic ROTC or Advanced ROTC. In curricula that do not allow for six hours of electives, ROTC may be taken in lieu of required courses with approval of the departmental adviser. University core courses may not be replaced by Basic or Advanced ROTC.

**Music Performance - Composition and Technology**

The BM in Music Performance - Music Composition and Technology will be an additional concentration added to the existing Bachelor of Music degree. Other concentrations in the degree currently include instrumental performance, vocal performance, and piano performance. This concentration will follow the same structure and share much of the same coursework as the other existing concentrations, but will prepare students for careers in the creation of musical content for concert ensembles, film, video games, and commercial artists.
Composition and Technology students will be trained in the composition of music of a variety of different genres, utilizing state-of-the-art computer and recording studio technology. They will take weekly one-on-one lessons with composition faculty using digital audio workstation and sound sample library technology, and will develop their competency in additional related areas of music technology through relevant coursework. Students will develop basic musicianship skills in music theory, history, and conducting courses as well as performing with musical ensembles. Finally, students will be required to present two public recitals of their work, with their senior recital serving as their capstone project. As in the other BM Performance concentrations, students must earn a "C" or higher in all coursework for the major.

Please see attached curriculum documents for complete coursework by semester, as well as a side-by-side comparison of the current BM concentrations with the new concentration to illustrate similarity in scope and curricular structure. Four new courses are being proposed for this curriculum; these courses are identified on the comparison spreadsheet.

How have countries developed in the past, and what strategies can under-developed countries take to increase their level of political and economic development? How have our collective views on “how development happens” changed over time, and where do they stand currently? What role do donors, aid, and NGOs play in development? What do NGO development practitioners need to know in order to do their jobs well? Graduate students only, unless student is enrolled in the MPA’s ABM program.</td>
