Vision and Mission

Vision
To lead and shape the future of higher education.

Our vision describes the aspiration for Auburn University 20 years in the future. It is deliberately intended to be lofty — realistic and ever challenging while also bold and ambitious. It is a challenge to ourselves to achieve greatness. Our vision is an invitation to the Auburn Family and those who do not yet know Auburn University to join us in our quest to inspire, innovate, and transform.

Auburn University has established itself as an excellent comprehensive, public land-grant university. However, excellence is not enough. We aspire to become a world-renowned institution that excels in education, research, and service—and to become a model of higher education. We understand that higher education is on the precipice of change. We intend to lead and shape that change.

Our goals describe Auburn University’s highest priorities for the next five years. The accomplishment of these goals will best position our institution to achieve its 20-year vision.

Mission
As a land-grant institution, Auburn University is dedicated to improving the lives of the people of Alabama, the nation, and the world through forward-thinking education, life-enhancing research and scholarship, and selfless service.

Auburn University’s mission concisely describes our central purpose. Our mission statement begins with a reference to the university’s origins and obligations as a public land-grant university. The 1862 Morrill Act created institutions of higher education that focused on agriculture and mechanical arts—a response to changing social and economic conditions. Land-grant universities would provide practical solutions to pressing societal problems and provide higher education to a much broader segment of American citizenry. Land-grant universities would eventually serve as the creators of economic opportunity and development. As such, we must never lose sight of the important educational, research and service responsibilities inherent in our land-grant lineage. Subsequent to its founding as a land-grant university, Auburn has also been designated, through federal legislation, as a sea-grant and space-grant university.

Our first responsibility is to educate our students and prepare them for life. We endeavor to expand their minds, broaden their experiences, and hone their capabilities by imparting both theoretical knowledge and practical skills. Our goal is to empower and inspire our students to be their very best and to achieve their hopes and dreams. A key element of our public charter and of the Auburn Creed is to ensure our students are instilled with a strong work ethic, sound character traits, and core values of honesty and respect. We encourage students to make valuable contributions and to lead their fellow citizens in creating meaningful change. This responsibility to build moral character and inculcate active social responsibility distinguishes the student experience at all land-grant universities, and certainly at Auburn University.

Our second responsibility is to drive the development of research and scholarship that creates and advances knowledge. We support, build upon, and leverage the expertise of our faculty, students, and partners to discover, innovate, and create new science, new technologies, and new applications and methodologies that tangibly improve our world.

Our third responsibility, engagement and outreach, leverages the value of the first two elements. Our duty is to enable our students, graduates, faculty and partners to transform the fruits of our research and scholarship into products, methods, and services that meet our communities’ most pressing needs. Delivering real-world, practical solutions is what sets land-grant universities apart and is core to Auburn University’s foundation.

To be among the best land-grant universities, we must continue to excel in all three responsibilities. This requires leveraging the synergy found in the interchange of education, research, and service to maximize our impact on Alabama and the world.

Instruction
Auburn University is committed to excellence in teaching at both the undergraduate and the graduate level. This commitment has long been reflected in the diversity of course offerings and in the variety of instructional approaches that are offered. Increasingly, electronic technology is providing instructors with innovative and creative teaching strategies. The high academic aptitude of the university’s incoming students also makes accelerated learning possible.

The liberal arts and sciences - introduced in the university’s nationally recognized Core Curriculum - are the heart of Auburn’s undergraduate programs. They lay the foundation not only for advanced study and career preparation but also for the development of a more responsible citizenry through students’ personal and intellectual growth. The Core Curriculum provides students with a common
Vision and Mission

set of experiences, develops their powers of analysis and communication, and encourages their understanding of human culture and the natural world. Auburn has won recognition for its high academic quality.

Auburn offers baccalaureate degrees in more than 130 areas across the spectrum of disciplines and provides the state’s only publicly supported programs in many fields, including several in agriculture, architecture, building science, forestry, pharmacy, and veterinary medicine. Particularly strong baccalaureate programs can be found in the Colleges of Business, Education, Engineering, Liberal Arts, and Sciences and Mathematics. For many years, ROTC programs at Auburn have also been nationally prominent in providing leadership for the military.

While Auburn has long been widely recognized for the quality and diversity of its undergraduate and first-professional programs, more recently expanding research accomplishments have broadened the scope and raised the prominence of the university’s graduate programs. Today Auburn supports a comprehensive graduate school, providing master’s level programs in more than 64 areas and awarding the doctorate in more than 40 fields. In many fields it offers the state’s only doctoral program. For many years the university has enjoyed strong graduate programs in agriculture, the biological and physical sciences, education, engineering, forestry, the human sciences, mathematics, pharmacy and veterinary medicine. More recently, excellent graduate programs have also emerged in business, the liberal arts and the social sciences. The university anticipates expanded research activity and graduate instruction, especially in agriculture and the biological sciences, in engineering and the physical sciences, in veterinary and pharmacal sciences, as well as in business and education.

Research

Research is the means through which new knowledge is created and new information is developed. As such, research at Auburn University is an essential link in its three-pronged mission of instruction, research and outreach. Successes among the varied research activities within each of our 12 academic schools and colleges continue to bolster Auburn’s reputation among the nation’s top universities.

Auburn’s role as a land-grant university emphasizes research in agriculture, natural resources, the life sciences, engineering and the physical sciences. Strong and expanding research programs exist in agriculture; architecture, design and construction; business; education; engineering; forestry and wildlife sciences; human sciences; the liberal arts; nursing; pharmacy; science and mathematics; and veterinary medicine.

Whether in the laboratory, the field, or in the classroom, Auburn University’s research endeavors are diverse, comprehensive, and collaborative, focusing on developing solutions to major problems that confront humankind and on expanding the base of knowledge and technologies available to improve our quality of life. Additionally, major efforts to increase the protection and commercialization of intellectual properties are central to Auburn’s continual drive for improvements in its research mission.

These efforts mesh to create a research environment that enhances the state’s economic, cultural, social and intellectual development and, at the same time, undergirds the university’s undergraduate, graduate, professional and outreach programs.

In support of these efforts, the Auburn University Huntsville Research Center interfaces with agencies and industries in order to increase research funding, raise our national profile, as well as bring new ideas and products to government, industries and consumers. A high-tech economic engine for Alabama, Huntsville executes billions of dollars in federal contracts yearly. Increasingly, these contracts require the collaboration of a broad array of disciplines. The Auburn University Huntsville Research Center enables North Alabama business, industry, and government to access the capabilities of one of the Southeast’s major research institutions.

Lastly, the Auburn Research and Technology Foundation (ARTF) and the Auburn Research Park were developed to further integrate research and the business community to complement the economic development and research initiatives of the university. In addition to facilitating the commercialization of university technologies and industry-university partnerships, the research park offers employment opportunities for Auburn’s students and graduates, as well as a thriving business incubator.

Outreach

As a land-grant institution, Auburn University has a mission of outreach – engaging its expertise beyond campus to improve quality of life across Alabama, nationally, and even internationally. More importantly, outreach provides opportunities for engagement to establish mutually beneficial and reciprocal partnerships between Auburn University and the communities that it serves. Through outreach and extension programs, citizens benefit from greater access to Auburn’s high quality educational resources. Community collaboration benefits the university as well, providing valuable insights and information for teaching and research, and enhancing the institution’s relevance to the broader society. Auburn University is recognized by the Carnegie Foundation’s “Community Engaged Institution” designation for the quality and scope of its outreach programming.
Outreach includes three major areas of engagement activity – lifelong learning, knowledge expertise, and community partnership. Auburn University’s lifelong learning programs expand access to learning for individuals of all ages, offering opportunities for professional continuing education as well as skills development and personal enrichment. The university shares its knowledge and expertise with the public to strengthen business, education, healthcare, and government, and address other issues of mutual concern. Finally, engaged partnerships help bond Auburn University faculty, students and communities in a variety of enriching activities which promote scholarship, learning, public service and civic involvement, and contribute to the common good.

Much of Auburn’s engagement focuses on university strategic objectives for enhancing learning, expanding community economic development and improving health, wellness and quality of life. University faculty members are engaged significantly in these outreach initiatives. Auburn students have a role in the outreach mission too, and there are many innovative ways for students and their faculty mentors to collaborate in community engagement locally, regionally, and even internationally. The Office of the Vice President for University Outreach provides administrative leadership and support for faculty and student outreach work campus wide, as well as in developing community partnerships. Units comprising University Outreach include the Center for Educational Outreach and Engagement, the Government and Economic Development Institute, Encyclopedia of Alabama, Office of Faculty Engagement, Office of Professional and Continuing Education, Office of Public Service, Osher Lifelong Learning Institute, and the Outreach-Global initiative.

University Outreach is also home to the AUBURNSERVES initiative (www.auburnserves.com), a collaboration of Auburn’s faculty, academic units, campus organizations, and community partners supporting service-learning, experiential education, public service, and engagement programs.

There are more than 75 outreach units and program initiatives within the university’s schools and colleges. Some of these include the Caroline Marshall Draughon Center for the Arts and Humanities in Liberal Arts, the Auburn Technical Assistance Center in Business, the Truman Pierce Institute in Education, Engineering Continuing Education, and the Rural Studio and Urban Studio programs in Architecture. Auburn University also serves as the headquarters for Alabama’s Cooperative Extension System, which serves all 67 Alabama counties with educational programs and services provided by faculty specialists and local extension educators.

From this base of organizational and faculty resources, Auburn hosts a diverse range of outreach activities. Annually, the university produces hundreds of conferences, non-credit courses and training programs, with registrations averaging more than 40,000. Many of these programs are approved to offer continuing education units (CEUs) and other certifications of completion. Auburn collaborates on hundreds of technical assistance projects annually with industrial and governmental constituents across the state, representing millions of dollars in direct impact from improved processes, cost savings, and investments. Auburn supports roughly 100 outreach facilities and research sites throughout Alabama, giving the university a statewide community presence greater than any other educational institution. This makes Auburn’s outreach resources highly accessible to citizens.

Lists of professional programs are available at the www.auburn.edu/outreach/opce website. A comprehensive directory of Auburn’s outreach resources and contacts is available at www.auburn.edu/outreach.
